RETALIATORY DISCLOSURE:
WHEN IDENTIFYING THE COMPLAINANT IS AN ADVERSE ACTION*

JAMIE DARIN PRENKERT,** JULIE MANNING MAGID***
& ALLISON FETTER-HARROTT****

Sometimes the possibility of being publicly identified as a complainant will be enough to discourage a person from complaining. That is especially true when being identified as a complainant exposes her to a greater likelihood of reprisal. This Article addresses the circumstances when such publicity can be deemed materially adverse, such that it ought to be sufficient to support a claim of retaliation. It focuses on the particular context of claims of employment discrimination, especially pursuant to Title VII of the 1964 Civil Rights Act. When an employee or applicant for employment files a charge of discrimination with the Equal Employment Opportunity Commission ("EEOC"), the EEOC undertakes a process that is neither wholly public nor wholly private. The EEOC and its employees are statutorily required to treat the charge confidentially, upon penalty of fine or imprisonment. Nevertheless, charging parties sometimes publicize the filing of their charges to exploit the possibility that the threat of negative publicity will induce their employers to negotiate or settle. The quasi-public nature of the EEOC's charge and investigation process has resulted in an important doctrinal gap in Title VII retaliation jurisprudence. While courts have refined the doctrine of statutory retaliation significantly in recent

years, most notably in the U.S. Supreme Court’s decision in Burlington Northern & Santa Fe Railway v. White, no unified body of law addresses whether or in what circumstances an employer’s disclosure of the existence and identity of a complainant amounts to a materially adverse action under Title VII. This lack of guidance in the retaliation case law and the fact that the EEOC’s confidentiality requirements under Title VII are facially inapplicable to the parties necessitate seeking alternative sources of guidance in cases alleging retaliatory disclosure. We look to several sources of guidance to craft a framework that courts should use when analyzing claims of retaliatory disclosure. First, we look to the guidelines that federal courts use to determine whether a litigant should be allowed to proceed anonymously. Second, the White material adverse action standard focuses on actions that “could well dissuade a reasonable worker from making or supporting a charge of discrimination.” Thus, we look to social science research examining whistleblower motivation to give some guidance on what, in reality, affects an individual’s decision to complain or not complain about a perceived wrongdoing. Finally, we consider how to incorporate into our framework of retaliatory disclosure those employment discrimination standards that clearly encourage employers to take effective remedial action, which may require disclosure of complainant identity.

INTRODUCTION

Oscar Wilde is purported to have said, “The only thing worse than being talked about is not being talked about.”1 Similarly, P.T. Barnum and others have been credited with variations on the statement, “There’s no such thing as bad publicity.”2 This Article explores a particular context—when an employer widely discloses the identity of a discrimination complainant or charging party—in which Wilde and Barnum were woefully mistaken. A whistleblower, in some instances, will covet anonymity. She may find that public disclosure of her identity is threatening and can lead to adverse consequences. As a result, the employer that “talks” or “publicizes” may find itself subject to a claim of unlawful retaliation. But the line that delineates

2. See There Is No Such Thing as Bad Publicity, THE PHRASE FINDER, http://www.phrases.org.uk/meanings/there-is-no-such-thing-as-bad-publicity.html (last visited Feb. 4, 2013) (noting that, despite widespread attribution to him, no hard evidence links Barnum to the phrase, and indicating that the most clearly attributable variation is Irish writer Brendan Behan’s: “There’s no such thing as bad publicity except your own obituary.”).
bad publicity (i.e., retaliation) from permissible disclosure (e.g.,
investigation, idle chatter) needs clarification. In this Article, we offer
a framework to analyze when an employer's disclosure of a
complainant's identity should be labeled "retaliatory disclosure," such
that it is a materially adverse action upon which a claimant can base
an additional claim of retaliation. We begin with a brief case study.

For twenty-six years, Belmont Abbey College ("Belmont
Abbey" or the "College"), an institution founded
by Benedictine Monks and identified as a Benedictine Catholic college,\(^3\) offered
health insurance benefits that included coverage for prescription
contraception.\(^4\) In December 2007, Belmont Abbey changed its
health insurance benefits to exclude coverage for oral contraceptives
as well as abortions, vasectomies, and tubal ligations.\(^5\) Belmont
Abbey's Catholic traditions include religious teachings prohibiting
the use of contraception.\(^6\) The decision to remove this coverage was,
as expressed by many members of the Belmont Abbey community,
including faculty, staff, and students, a way to align practice with the
beliefs the College espouses.\(^7\)

Not everyone in the Belmont Abbey community, however,
agreed. Eight faculty members—six men and two women—filed a
charge with the U.S. Equal Employment Opportunity Commission
("EEOC") alleging that the change in the College's health insurance
plan denying contraceptive benefits discriminated against them on the

contraception morally permissible. This infallible teaching of the Catholic Church flows
from the natural law as given to us by God. As such, the teaching applies to all men and
women." (citing Pope Paul VI, HUMANAE VITAE 18 (1968) and CATECHISM OF THE
CATHOLIC CHURCH § 2036)).

7. See Menken, supra note 4 (relying on student blog comments for evidence to
support the claim that many members of the community supported the change).
basis of gender and religion. The gender-based discrimination claim arose because excluding prescription contraceptives impacts women exclusively. The religion-based claim focused on the College denying coverage to faculty and staff who did not hold the same religious beliefs as the College.

William Thierfelder became president of Belmont Abbey in 2004. His path to academia was atypical in that he held prominent positions in the sports business community prior to becoming President of the College. His reaction to the charge of discrimination filed by faculty in 2007 also was somewhat atypical. He sent an e-mail to faculty, staff, and students notifying them of the claim based on the revised Belmont Abbey health insurance benefits coverage and identifying by name the eight faculty members who filed the complaint with the EEOC. This e-mail resulted in an additional EEOC charge against the College—this one alleging retaliation.

In a July 30, 2009 Determination Letter ("Determination Letter"), the EEOC found reasonable cause to believe Belmont Abbey had discriminated against the charging parties based on sex but found "no cause" supporting the religious discrimination charge. Separately, the EEOC indicated that Thierfelder's e-mail to faculty, staff, and students in which he identified individually the faculty that filed the EEOC complaint constituted cause to find retaliation. Specifically, the EEOC found that the faculty members were

exercising their legal right to file a claim with the EEOC.\textsuperscript{17} Thierfelder’s e-mail in response to the filing, the EEOC found, was intended to produce a “chilling effect” on the campus and to create an environment where faculty and staff would hesitate before filing complaints against the College.\textsuperscript{18} 

The religious discrimination claim was the only claim that the EEOC found was unsupported by the evidence.\textsuperscript{19} In its Determination Letter, the EEOC stated that the contraceptive “benefits were not changed based on each individual employee’s religious beliefs; contraception benefits were removed from the health plan for all employees, regardless of religions.”\textsuperscript{20} Ironically, it was the religious nature of the contraception dispute at the College that received the most attention as a firestorm erupted in the media.\textsuperscript{21} Education forums, religion-focused blogs, and business publications all weighed in on the debate, much of the coverage politicizing the Determination Letter.\textsuperscript{22} 

The Belmont Abbey charges offer numerous lenses through which to examine the legacy of Title VII jurisprudence and related legislative actions and judicial decisions. Certainly, the religious

\begin{itemize}
  \item \textsuperscript{17} See id.
  \item \textsuperscript{18} See id. ("Clearly, the president could have explained why the college was taking contraception benefits out of its new employee health insurance policy without stating each of your names as the persons who filed the charges." (quoting a March 5, 2009, letter from Victoria Mackey, EEOC Senior Investigator, to the faculty members filing charges) (internal quotation marks omitted)).
  \item \textsuperscript{19} Belmont Abbey does not require its employees to adhere to the Catholic Church’s tenets. See id.
  \item \textsuperscript{20} Determination Letter, supra note 8; Fong, supra note 9 (quoting Determination Letter).
  \item \textsuperscript{21} That outpouring of attention to the religious discrimination portion of the charge foreshadowed the related controversy during 2012 in which Catholic organizations decried regulations pursuant to the Patient Protection and Affordable Care Act (colloquially known as “Obamacare”), which would have required some religious organizations to provide coverage for reproductive health care, including contraceptives and sterilization. See Contraception and Insurance Coverage (Religious Exemption Debate), N.Y. TIMES, http://topics.nytimes.com/top/news/health/diseasesconditionsandhealthtopics/healthinsurance_and_managed_care/healthcare_reform/contraception/index.html (last updated May 21, 2012). Thierfelder led Belmont Abbey to the forefront of that debate, filing a lawsuit claiming that the regulations violated the First Amendment’s free exercise clause. See Feds Ask for Delay in Belmont Abbey College’s Lawsuit Against HHS Mandate, CATH. NEWS HERALD (Jan. 20, 2012, 1:34 PM), http://www.charlottediocese.org/n/features/53-roknovspaper-local/1338-belmont-abbey-colleges-lawsuit-continues-lawyers-call-hhs-contraception-rule-a-coercive-action.
  \item \textsuperscript{22} See, e.g., Davis, supra note 5, at 381 n.13. Belmont Abbey proudly collected and promoted the coverage. See Belmont Abbey College vs. EEOC, BELMONT ABBEY COLL., www.belmontabbeycollege.edu/eeoc (last visited Jan. 26, 2013) (linking representative media coverage of the EEOC’s determination of discrimination). 
\end{itemize}
discrimination charge levied against a religious institution prompts a nuanced interpretation of the basis for a religious exemption from federal antidiscrimination statutes. The sex discrimination charge as it relates to prescription contraceptives remains legally nebulous. However, as was indicated at the outset, the authors believe that the most compelling legal lens through which to consider the Belmont Abbey controversy is not the discrimination claims but the most overlooked and final claim added to the charge—retaliation—which has potential impact for employers (and their employees) of virtually any type.

Clearly the faculty members identified in President Thierfelder's e-mail and the EEOC diverged from the sentiments attributed to Oscar Wilde and P.T. Barnum. They considered the publicity and talk to which they were subjected to be negative on the whole. As a result, the entire retaliation claim was based on Thierfelder's identification of the eight charging parties, which raises the interesting question of when “bad publicity” is bad enough to constitute unlawful retaliation. Although notifying the Belmont Abbey community of changes in the health care coverage or of concerns voiced by faculty regarding these changes did not require an identification of the faculty involved in the EEOC charge, presumably “naming names” should not always be a viable basis for a retaliation claim. That might seem particularly important when, as with the Belmont Abbey charge, many of the faculty members involved were willing to speak to the media about the claims. So when is disclosure of complainants’ identities an adverse action that supports a retaliation claim?

To be sure, filing an EEOC charge does not shroud those involved in secrecy. The very intent of filing a charge is to commence

an investigation of a complaint, including disclosing the complaint to the employer. Nevertheless, certain disclosures may constitute an adverse action under Title VII jurisprudence if they are likely to have the type of chilling effect on the enforcement of the antidiscrimination laws that the EEOC contemplated. If so, what is the standard for disclosure to assure it does not result in adverse action?

This Article examines whether and in what circumstances an employer’s disclosure of the existence and identity of employees who complain of discrimination should constitute an adverse action to support a Title VII retaliation claim. Part I examines how the U.S. Supreme Court significantly refined statutory retaliation doctrine in recent years, most notably in Burlington Northern & Santa Fe Railway Co. v. White. Part II then explores whether, in the context of the Supreme Court’s generally solicitous approach to retaliation plaintiffs and the White standard for materially adverse actions, existing statutory requirements, EEOC guidance, or retaliation case law provides specific guidance as to whether disclosure by the employer of the existence and identity of a complainant alleging unlawful discrimination amounts to a materially adverse action under Title VII. While each provides some clues as to how retaliatory disclosure claims should be handled, there is no clear or emerging doctrinal approach to be found in or among them. This doctrinal gap is significant and implicates interests for employers and employees alike. The lack of guidance from case law, legislation, and agency requirements necessitates consideration of alternative sources of guidance. Part III utilizes the stated rationale for anonymity and pseudonymity in federal court litigation as well as social science

25. Although we focus our discussion on the Title VII retaliation claim, our analysis would likely apply with equal force to retaliation claims under the Age Discrimination in Employment Act, 24 U.S.C. § 623 (2006), the Americans with Disabilities Act, 42 U.S.C. § 12203 (2006), the Family and Medical Leave Act, 29 U.S.C. § 2615(a)(2) (2006), the Employee Retirement Income Security Act, 29 U.S.C. § 1140 (2006), and the Fair Labor Standards Act, 29 U.S.C. § 215(a)(3) (2006), all of which have language that is identical or similar enough in relevant respects to Title VII to incorporate White’s “materially adverse action” standard, discussed infra Part II. See Alex P. Long, Employment Retaliation and the Accident of Text, 90 OR. L. REV. 525, 546-47 (2011). Our analysis probably has little reach beyond those statutes. As Professor Alex Long explains, statutory provisions governing employment retaliation claims—though multitudinous—are wildly divergent. See id. While Part I discusses the Supreme Court’s general approach to statutory retaliation claims, for purposes of clarity and readability, we are careful to confine our specific discussion in the remaining parts to Title VII, with the understanding that it has some application outside that context.

research examining the motivations of whistleblowers as perspectives to inform the discussion. Part IV then offers a framework concerning when disclosure of complainants' identities constitutes an adverse action. The framework identifies two types of retaliatory disclosure: primary (when the disclosure itself involves such a sensitive issue that it is retaliatory all on its own) and secondary (when disclosure is retaliatory because it increases the likelihood that the complainant will suffer other types of retribution). Part V identifies a prescriptive balance—a “need to know” standard—that considers the interests of both employers and employees in retaliatory disclosure claims. The Article concludes by noting that the proposed framework is flexible enough to accommodate those interests, while providing much-needed guidance that is currently lacking in the Title VII retaliation doctrine.

I. RETALIATION’S EMERGENCE AND EXPANSION

Congress understood the risks associated with employees exercising their rights against discrimination in the workplace at the time of Title VII’s passage. Section 704 of Title VII prohibits employer retaliation against employees who enforce their antidiscrimination rights. Using intentionally broad language, this provision protects employee conduct. It grants to employees freedom from interference by employers while pursuing the guarantee of equality in the workplace. Since its passage, however, the broad language has required repeated refinement by the federal courts.

28. Section 704 provides, in part:

It shall be an unlawful employment practice for an employer to discriminate against any of his employees or applicants for employment ... because he has opposed any practice made an unlawful employment practice by this subchapter, or because he has made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this subchapter.

29. White, 548 U.S. at 64 (“Thus, purpose reinforces what language already indicates, namely, that the antiretaliation provision, unlike the substantive provision, is not limited to discriminatory actions that affect the terms and conditions of employment.”).
30. Id. at 63.
A. Retaliation Claims on the Rise

Charges of retaliation rose 105% between fiscal years 1997 and 2011. And, as a proportion of all claims filed with the EEOC, retaliation claims rose to fifteen percent, while other types of claims either decreased or remained at the same percentage of the total. The most significant jump occurred between 2006 and 2007—following the Supreme Court's 2006 decision in Burlington Northern & Santa Fe Railway Co. v. White—when the number of retaliation charges leapt nearly twenty percent in a single year.

The reason for the spike in retaliation claims is somewhat unclear. Some attribute the rise to an actual increase in retaliation, while others point to the experience of employees and the plaintiffs' bar that retaliation claims are often successful even when the underlying discrimination claim is dismissed. Still others opine that judges and juries might be less likely to believe allegations of discrimination while "'every[one] ... who has ever worked understands retaliation,'" making it a desirable route of recovery. As described below, the holding in White could be read to reinforce each of these latter two explanations, making it easier to succeed on retaliation claims and confirming the belief that retaliation is more frequent than discrimination. Regardless of the root causes, the onslaught of retaliation charges reportedly has left employers feeling "paralyzed" when dealing with employee misconduct after advancement of a discrimination complaint.

35. See Laura Beth Nielsen & Robert Nelson, Rights Realized? An Empirical Analysis of Employment Discrimination Litigation as a Claiming System, 2005 WIS. L. REV. 663, 690-91 (speculating about the reasons for the rise in retaliation charges); Joan M. Savage, Note, Adopting the EEOC Deterrence Approach to the Adverse Employment Action Prong in a Prima Facie Case for Title VII Retaliation, 46 B.C. L. REV. 215, 216 (2004) ("Plaintiffs find that they can recover on a retaliation claim even when the court dismisses their underlying claim. Retaliation claims have been successful with juries . . . .").
37. See infra text accompanying notes 56-67.
B. Retaliation Claims and the Supreme Court

The Supreme Court’s docket has reflected retaliation’s growth trend. The Court heard at least one statutory retaliation claim each year from 2008 through 2011. The leading case interpreting Title VII’s antiretaliation provision is the Court’s opinion in White.

To state a prima facie claim of retaliation under Title VII, a plaintiff must offer evidence that (1) she has engaged in a protected activity under the law, (2) she was subjected to an adverse action, and (3) there is a causal connection between the two. No claim can survive, then, without alleging and proving that the employer subjected the claimant to some act that rises to the level of adversity contemplated under Title VII. In the years leading up to White, a split emerged among the circuits as to exactly what kind of adverse action could anchor a retaliation claim under Title VII.

This controversy focused on the relative badness of the action and its proximity to the employment relationship. Some circuits defined employer actions required for a retaliation claim narrowly, allowing plaintiffs to bring such a claim based only on an allegedly retaliatory “ultimate employment decision[,]” like hiring, firing, and promotion. Some circuits applied in the retaliation context the “adverse action” standard generally governing the discrimination provision of Title VII, which permits a plaintiff to base a claim on only an adverse employment action—that is, one affecting an

41. See Lebofsky v. City of Phila., 394 F. App’x 935, 938 (3d Cir. 2010).
42. See, e.g., Vance v. Ball State Univ., 646 F.3d 461, 474–75 (7th Cir. 2011) (finding plaintiff’s claim deficient for failure to advance allegations of a materially adverse action), cert. granted on other grounds, 133 S. Ct. 23 (2012).
43. See White, 548 U.S. at 59–62.
44. See, e.g., Mattern v. Eastman Kodak Co., 104 F.3d 702, 707 (5th Cir. 1997) (finding that hostility from fellow employees, stolen tools, and anxiety are not ultimate employment decisions); Manning v. Metro. Life Ins. Co., 127 F.3d 686, 692 (8th Cir. 1997) (“Absent evidence of some more tangible change in duties or working conditions that constituted a material employment disadvantage, we must agree with the district court that [plaintiffs] did not present evidence sufficient to demonstrate any adverse employment action that constitutes the sort of ultimate employment decision intended to be actionable under Title VII.”).
individual's benefits, terms, or conditions of employment.\textsuperscript{45} Still other circuits held that any materially adverse action—even one not substantially altering employment—might be the basis of a valid Title VII retaliation claim.\textsuperscript{46}

\textit{White} gave the Supreme Court the chance to resolve the circuit split. In 1997, Burlington Northern hired plaintiff White as a track laborer in its Tennessee yard, where she was the only woman in the company's Maintenance of Way department.\textsuperscript{47} After White was assigned to assume some forklift operation tasks, she reported to the company roadmaster that her immediate supervisor repeatedly complained to her that women should not be assigned to the department and that he made inappropriate comments to her in front of male colleagues.\textsuperscript{48} The company suspended the supervisor and required him to attend additional training,\textsuperscript{49} but in the same conversation in which the higher-ranking roadmaster informed White of the supervisor's discipline, he also told her that she would be transferred from her forklift duties so that a "more senior man" could perform that "less arduous and cleaner job."\textsuperscript{50} A short time later, when the supervisor about whom White complained reported that White had been insubordinate, the roadmaster suspended her.\textsuperscript{51} Consequently, she filed an internal grievance. White was cleared of the insubordination allegation through the company's internal procedure, and she was awarded back pay for the suspension, which in the end totaled thirty-seven days.\textsuperscript{52}

\begin{flushright}
\textsuperscript{45} See, e.g., Stavropoulos v. Firestone, 361 F.3d 610, 617 (11th Cir. 2004) (rejecting plaintiff's retaliation claim for lack of adverse action where "acts [plaintiff] complain[ed] of ultimately had no effect on [plaintiff]'s employment status"); Von Gunten v. Maryland, 243 F.3d 858, 865 (4th Cir. 2001) ("What is necessary in all ... retaliation cases is evidence that the challenged discriminatory acts or harassment adversely affected [sic] 'the terms, conditions, or benefits' of the plaintiff's employment." (citing Munday v. Waste Mgmt. of N. Am., Inc., 126 F.3d 239, 242 (4th Cir. 1997))).
\textsuperscript{46} See, e.g., Aviles v. Cornell Forge Co., 183 F.3d 598, 606 (7th Cir. 1999) (explaining that retaliation claims might anchor on adverse actions "not ostensibly employment related"); Passer v. Am. Chem. Soc'y, 935 F.2d 322, 330-31 (D.C. Cir. 1991) (finding an adverse action in an employer's cancellation of an awards ceremony honoring the plaintiff, following the plaintiff's allegation of discrimination); Sherman v. Burke Contracting, Inc., 891 F.2d 1527, 1532 (11th Cir. 1990) (rejecting defendant's theory that plaintiff's retaliation claim must be anchored on an employment action related to the employment relationship with the defendant and finding that the alleged act of convincing subsequent employer to terminate plaintiff's subsequent employment amounted to adverse action).

\end{flushright}
White brought a Title VII retaliation claim against Burlington based on her suspension and the transfer of her duties away from the forklift. A jury found in her favor. The Sixth Circuit Court of Appeals initially reversed the decision but later affirmed the district court in an en banc opinion. The judges on the en banc panel disagreed amongst themselves, however, as to the standard to apply to the adverse action prong of White's retaliation claim.

On appeal, the Supreme Court adopted the broadest view accepted in the circuit courts. To be “actionable” under Title VII's antiretaliation provisions, the Court explained, an employer's action need not be employment related, nor must it even happen in the workplace. Rather, an employer's retaliatory act is actionable under Title VII when it is materially adverse to an employee or applicant, meaning that the “actions must be harmful to the point that they could well dissuade a reasonable worker from making or supporting a charge of discrimination.”

The Court's decision was based on two lines of reasoning. First, construing the plain language of the statute and comparing the antidiscrimination and antiretaliation provisions, the Court thought it most reasonable to interpret the retaliation protections more broadly. While Title VII's antidiscrimination provision, by its terms, limits its application to hiring, firing, compensation, and other “terms, conditions, or privileges of employment,” the antiretaliation provision applies no such restriction. Second, and significantly, to limit the scope of the antiretaliation provision of Title VII merely to work-related actions would not fully serve the purpose of deterring discrimination and retaliation. To do so might permit employers to otherwise deter employees from exercising their rights under Title VII. For example, an employee who understands that the result of filing a charge of sexual harassment (or even complaining about harassment) is that she will be fired in retaliation for the charge or complaint will not likely file the charge or complaint in the first place. Thus, the antiretaliation provision critically supports the

59. White, 548 U.S. at 62-63 (citing 42 U.S.C. §§ 2000e-2(a), -3(a)).
60. Id. at 63-64.
antidiscrimination provision. Without the former, there can be no, or significantly less, enforcement of the latter. Accordingly, the Court reasoned that applying the retaliation provision to actions both within and outside of the workplace would best preserve access to Title VII's protective mechanisms.

This does not mean that every action an employee finds unpleasant, rude, or annoying is automatically an "adverse action" within Title VII jurisprudence. Rather, to be actionable, the adversity must be material, not trivial. The standard is context-specific, some actions in some circumstances might not be materially adverse—meaning they would not deter the reasonable worker from pursuing his rights under Title VII—but they might nonetheless be so in other circumstances. Given the circumstances facing White, the Court reasoned that a reasonable jury could have found that the transfer of her duties and the suspension without pay—regardless of whether the pay was restored—were materially adverse as contemplated by Title VII.

In the years since White, courts have continued to struggle to parse prevailing thresholds regarding what does and does not amount to a "materially adverse action" on which a Title VII retaliation claim may be based. A unified and consistent doctrine has not emerged. The circuit and district courts have continued to struggle with the application of the materially adverse action standard, including determining whether and under what conditions reassignment of duties, social isolation, investigation of the complainant's own

L. 530, 535 (2007) (noting that the White "test opens up more issues of fact for juries or judgest to consider, such as materiality and how the conduct would influence a reasonable person").
69. Compare Lucero v. Nettle Creek Sch. Corp., 566 F.3d 720, 728-30 (7th Cir. 2010) (holding that no reasonable employee would find a transfer of teaching responsibilities
conduct, or criticism and oral counseling might qualify.

The Supreme Court, for its part, has tacitly affirmed the breadth of its holding in White. In Thompson v. North American Stainless, LP, the Court examined whether an employer's firing of Thompson, the fiancé of a woman who filed a complaint of discrimination, constituted a cognizable claim of retaliation by Thompson. It found that the broad interpretation of antiretaliatory demanded such a finding because "a reasonable worker might be dissuaded from engaging in protected activity" if she were aware an employer would take action against a third party.

Nonetheless, no consistent jurisprudence has emerged as to

---

70. Compare Weger v. City of Ladue, 500 F.3d 710 (8th Cir. 2007) (finding any isolation of the plaintiff was not retaliatory because all communication officers were equally isolated), and Lytle v. JPMorgan Chase, No. 08-Civ.-9503, 2012 U.S. Dist. LEXIS 15599 (S.D.N.Y. Feb. 8, 2012) (finding no materially adverse action was taken against the plaintiff), with Freytes-Torres v. City of Sanford, 270 F. App’x 885, 894 (11th Cir. 2008) (holding that defendant’s “ostracization” of the plaintiff was “not substantial and just the sort of ‘petty slight’ that is not actionable under White”).

71. Compare Billings, 515 F.3d at 46 (finding any investigation into the plaintiff's unauthorized opening of a letter was not retaliatory), with Smith v. Harvey, 265 F. App’x 197, 201-02 (5th Cir. 2008) (finding no material adversity in an employer requiring the plaintiff to explain an unusually high telephone bill), and Weger, 500 F.3d at 727 (finding that requiring performance evaluations was not adverse action).

72. See Delgado-O’Neil v. City of Minneapolis, 745 F. Supp. 2d 894, 903 (D. Minn. 2010) (“In the context of a retaliation claim, verbal reprimands or coaching alone do not constitute the type of significant harm that would deter a reasonable employee from engaging in protected activity.”). But see Blue v. IBEW, 726 F. Supp. 2d 1009, 1017 (W.D. Wis. 2010) (holding that criticism may constitute a materially adverse action where plaintiff has never before been criticized or verbally reprimanded).

73. 131 S. Ct. 863, 868 (2011) (noting that the Court had held in White “that Title VII’s antiretaliation provision must be construed to cover a broad range of employer conduct.”)

74. The question presented to the Court was whether Thompson could pursue a claim under Title VII, even though he personally had not engaged in opposition or participation conduct as required by the antiretaliation provision of Title VII. Id. at 867. The Court determined he was a “person aggrieved” by a violation of Title VII and could, thus, pursue a claim in his own right. Id. at 870. The violation was the retaliatory conduct directed at his fiancé, Regalado. Thompson’s firing was understood by the Court as a materially adverse action against Regalado in retaliation for her protected activity, in that the termination of someone that close to her was likely to deter a reasonable employee from making a charge of discrimination. Id. at 867 (“[W]e have little difficulty concluding that if the facts alleged by Thompson are true, then [the employer’s] firing of Thompson violated Title VII.”).

75. Id. at 868.
whether disclosure by the employer of the existence and identity of a complainant alleging unlawful discrimination amounts to a materially adverse action. This doctrinal gap is significant and implicates interests for employers and employees alike. Employees may view as very important the extent to which their complaints and identities are not widely publicized. They may fear reprisal from specific individuals, including both supervisors and coworkers. They may feel shame or embarrassment at the treatment directed toward them, may wish simply to keep a low profile at work and not face being the center of a controversy, or may have other reasons for keeping private their complaints. If so, employer disclosure, or the threat of it, might well dissuade a reasonable employee from making or supporting a charge of discrimination under those circumstances. By the same token, some employees may wish to make public their allegations, perhaps hoping that the court of public opinion will assist them in advancing their claims or obtaining a settlement, or they may wish to make the public aware of what they rightly or wrongly perceive as injustice.  

Likewise, employers may have varying interests relating to the confidentiality of discrimination allegations. Employers may wish to keep complaints confidential to avoid disrupting the workplace, to preserve their public image, or to avoid encouraging copycat claims against them. They may, however, sometimes have interests in addressing such claims publicly, such as to refute a commonly known claim, to report to shareholders or other stakeholders, or to make public what they believe to be their own subjection to injustice.  

More pragmatically, employers must often conduct investigations of discrimination complaints against them, regardless of whether the complaints emerge internally or through the filing of a charge of

discrimination at the EEOC.78

The Belmont Abbey case falls in this doctrinal gap and demonstrates potentially competing interests of employers and employees. As previously noted, the President of the College singled out by name faculty members filing EEOC claims against the College based on a change in health care coverage of prescription contraception.79 Although the employees added a retaliation claim to the EEOC filing, several of them discussed the matter openly with press and Internet bloggers.80

Given the substantial and often competing interests that are at play in disclosure situations, in the next Part we analyze the statutory, regulatory, and case law to determine if existing positive law provides sufficient guidance to delineate the boundaries of a retaliatory disclosure claim.

II. EXISTING DOCTRINE AND RETALIATORY DISCLOSURE

Though the authors have coined the term “retaliatory disclosure,” this Article started from the point of view that it is possible that existing legal doctrine provides sufficient guidance as to the materiality of adversity posed by the disclosure of a complainant’s identity. This Article finds, though, that it does not. In this Part, it first looks to the statutory requirement of confidentiality of the EEOC charge process to determine whether the requirement provides direct or analogous authority to regulate disclosure. Finding that the confidentiality requirements are not directly applicable, this Article then looks to EEOC guidance documents for direction. The guidance documents are interesting but not directly on point; thus, this Article turns to retaliation case law to see how courts have handled disclosure claims in the past. Again, no clear doctrinal path emerges.

A. The Statute and EEOC Guidance

The issue of retaliatory disclosure would be easily enough

78. See infra Part II.A.2.
79. See supra text accompanying notes 13–14.
80. For example, Dr. David Neipert, one of the charging parties and then-former faculty at Belmont Abbey, authored a guest post for the Baltimore Sun explaining his perspective on the controversy. Neipert’s piece refuted criticisms of the case and added additional information about the circumstances and dynamics of communications at Belmont Abbey out of which the charges arose. David Neipert, Guest Post: Another View on Belmont Abbey, BALT. SUN (Oct. 19, 2009), http://weblogs.baltimoresun.com/news/faith/2009/10/guest_post_another_view_on_bel.html.
resolved if Title VII or EEOC regulations dealt directly with the responsibility of the parties to keep charge information confidential. Neither the statute nor agency guidance contemplates retaliatory disclosure specifically. What emerges from a review of both, however, is a picture of a process that is neither wholly private nor wholly public. Congress was clearly concerned with protecting the charge and conciliation process from public disclosure by the EEOC and its agents. But those requirements do not directly regulate the parties to the complaint. Moreover, EEOC guidance contemplates and encourages disclosure in some circumstances.

Title VII itself compels the EEOC to keep information regarding the details of a claim of discrimination or retaliation confidential from public view, stating:

Charges shall not be made public by the Commission . . . . If the Commission determines after such investigation that there is reasonable cause to believe that the charge is true, the Commission shall endeavor to eliminate any such alleged unlawful employment practice by informal methods of conference, conciliation, and persuasion. Nothing said or done during and as a part of such informal endeavors may be made public by the Commission, its officers or employees, or used as evidence in a subsequent proceeding without the written consent of the persons concerned. Any person who makes public information in violation of this subsection shall be fined not more than $1,000 or imprisoned for not more than one year, or both.\(^8^1\)

Courts have opined that this duty of confidentiality is twofold. The first requirement prohibits the Commission from publicizing an unproven charge,\(^8^2\) while the second imposes broader limits on the disclosure of information gathered in the conciliation process.\(^8^3\) The first, contrary to the interests implicated in a retaliatory disclosure claim, contemplates protection of the employer's interest in its

---

82. See Branch v. Phillips Petroleum Co., 638 F.2d 873, 879 (5th Cir. 1981) ("The [first confidentiality requirement] is not intended to hamper Commission investigations or proper cooperation with other State and Federal agencies, but rather is aimed at the making available to the general public of unproven charges."); H. Kessler & Co. v. EEOC, 472 F.2d 1147, 1150 (5th Cir. 1973) (citing 110 CONG. REC. 12723 (1964) (statement of Sen. Humphrey)).
reputation as the motive for confidentiality. Indeed, charging parties will often try to use public pressure by disclosing the charge details; however, Title VII makes clear that the EEOC cannot be complicit in the public airing of the details underlying the charge. The duty of confidentiality with respect to conciliation agreements is so powerful that at least one court has found that a breach of contract proceeding to enforce an oral conciliation agreement could not continue, with the importance of the confidentiality provision outweighing interest in the enforcement. And these nondisclosure provisions specifically exempt the information gained by the EEOC in its investigation and conciliation efforts from public release under the Freedom of Information Act (“FOIA”). The fact that the confidentiality of the information gained in the process outweighs the otherwise strong preference for transparency in government activity further underscores the depth of concern Congress had for protecting the sanctity and nonpublic nature of the charge process.

Regardless of how serious a duty this provision imposes on the EEOC, several courts have rejected the application of this provision to impose confidentiality constraints on employers. Additionally, several courts have opined that the provision was aimed at providing employers a “modicum of protection” for their confidential information and at encouraging conciliation and voluntary resolution by the parties. While this provision appears not to place on employers the same duty of silence imposed on the EEOC, it does little to answer whether disclosure can amount to retaliation.

The existence of the provision itself may indicate statutory intent to protect the privacy of the charging party, yet it applies to the privacy of both parties. As evidenced by the few courts that have opined on the intent of the provision, it may in fact be more indicative of a policy in favor of mediation and voluntary resolution than of privacy protection for any one person or entity involved in a charge.

84. See supra note 76 and accompanying text.
85. See Branch, 638 F.2d at 879–83.
88. See Univ. of Pa. v. EEOC, 493 U.S. 182, 192 (1990); Whitaker, 778 F.2d at 222.
89. See Branch, 638 F.2d at 880–81 (“[I]t is clear that Congress placed great emphasis upon private settlement and the elimination of unfair practices without litigation on the ground that voluntary compliance is preferable to court action. Indeed, it is apparent that the primary role of the EEOC is to seek elimination of unlawful employment practices by informal means leading to voluntary compliance.”).
2. Agency Guidance

Similarly, other EEOC guidance offers little indication as to whether disclosure is an adverse action. The EEOC has issued no regulations or guidance documents directly on point. There are, however, a couple of ancillary guidance documents that are relevant but that fail to provide a sufficient basis upon which to craft a complete account of retaliatory disclosure.

First, the EEOC's approach to disclosure of charge files pursuant to FOIA\(^\text{90}\) reflects the statute's treatment of charge information as quasi-private.\(^\text{91}\) Section 83 of the EEOC Compliance Manual\(^\text{92}\) implements the EEOC's regulations regarding rules that apply to the disclosure of charge files.\(^\text{93}\) The regulations state that "[u]nder sections 706 and 709 [of Title VII], case files involved in the administrative process of the Commission are not available to the public."\(^\text{94}\) Thus, the files are exempted from FOIA's disclosure requirements.\(^\text{95}\) Nevertheless, there are special disclosure rules that apply to the charging party, a person aggrieved upon whose behalf a charge has been filed, and entities against whom a charge has been filed.\(^\text{96}\) Compliance Manual section 83 provides those special disclosure rules. It states that providing such parties the file is not "making public" the file as prohibited by the statute and regulations.\(^\text{97}\) Those parties can submit a written request for the file,\(^\text{98}\) in which case the EEOC will sanitize the file of otherwise confidential information\(^\text{99}\) and disclose it. However, such parties once again become members of the public and, as such, are not entitled to disclosure when their notice of right to sue has lapsed without filing a complaint based on

\(^{98}\) Id. § 83.2.

\(^{99}\) Id. § 83.4 (including in the list of nondisclosable information attorney work product, intra-agency and interagency memoranda, information about related charges, settlement and conciliation records, sensitive medical information, confidential commercial information, and confidential witness information). The Compliance Manual also indicates that the identity of a party on whose behalf a charge has been filed should be removed from any disclosure. Id. § 83.4(g). This instruction is only for those charging parties for whom the charge was filed by another party and who requested their identity to remain confidential. Id.
the charge in federal court. Thus, as in the statute, the Compliance Manual makes clear that the EEOC may not be the source of disclosure to the public; however, the strong interest of certain parties in information related to the charge overrides even the general requirement of confidentiality imposed on the EEOC.

Second, the EEOC has interpreted Supreme Court precedent to encourage, if not require, some limited disclosure in certain circumstances. Yet this guidance does not justify all disclosures. Under Title VII jurisprudence, an employer can avoid vicarious liability for otherwise unlawful discrimination by showing (1) it exercised reasonable care to promptly prevent and correct any sexually harassing behavior and (2) the plaintiff unreasonably failed to take advantage of any preventive or corrective opportunities provided by the employer or otherwise to avoid harm. One might suppose that, at least with respect to internal complaints of discrimination, cases interpreting this defense, commonly referred to as the Faragher/Ellerth defense, might yield insight on an employer’s duty to keep confidential employee complaints of discrimination. Yet no consensus exists.

The EEOC’s enforcement guidance documents indeed recommend that an employer’s antidiscrimination and reporting policies require confidentiality, but these recommendations are not legally binding on employers. The Second Circuit has held that a company’s antidiscrimination policy need not require confidentiality to meet the requirements of the Faragher/Ellerth defense. “Indeed,” the court noted, “it is hard to imagine how a company could keep a complaint confidential and also conduct a fair and thorough investigation.” Yet opinions from other courts indicate that some kind of confidentiality guarantee might be required for the

104. *Id.*
employer to stand under the Faragher/Ellerth umbrella. In a 2007 case, a district court declined to grant summary judgment on Faragher/Ellerth immunity on the grounds that the supervisor receiving a complaint failed to maintain confidentiality, disclosed the complaint to the alleged discriminator immediately after it was filed, and questioned the complainant within earshot of the alleged discriminator. Another court found that evidence of a failure to provide confidentiality for internal complaints might indicate that the employer's policy is not protective enough to satisfy the Faragher/Ellerth demands. The inclusion of a provision guaranteeing confidentiality to the extent practical for conducting an effective investigation has been found to meet the defense's requirements of reasonableness, however. Accordingly, while the cases seem to favor the preservation of confidentiality as encouraged in the EEOC guidance, there is not a consensus among courts as to the requirement of such a guarantee, and several seem to observe that an effective investigation—also required by the guidance—at the very least requires some disclosure of the details of a complaint of discrimination.

Thus, the agency guidance does not provide sufficient direction for defining the parameters of a retaliatory disclosure claim. We next turn to the retaliation case law for assistance.

B. Case Law on Disclosure

Because the statute and agency guidance do not provide sufficient direction to build a doctrine of retaliatory disclosure, this Article turns to the case law interpreting Title VII's antiretaliation mandate to determine whether there are emerging themes through which to build a coherent framework or analysis of retaliatory disclosure. This is done by looking first to the pre-White case law, both for the purpose of completeness and with the understanding that it may be of limited value due to the shift White ushered in. Cases decided by the lower courts since the Supreme Court opinion in White are also considered, but are no more helpful.

1. Pre-White Cases Addressing Whether Disclosure Is Actionable

The majority of courts considering retaliatory disclosure claims prior to the Supreme Court's decision in *White* found that the action in question was not sufficient to be the basis for a retaliation claim.

In several cases, the courts' decisions were transparently based on antiquated pre-*White* standards regarding whether a claim is actionable under Title VII. For example, in *Hudson v. Tahoe Crystal Bay, Inc.*,109 the Ninth Circuit Court of Appeals rejected a plaintiff's retaliation claim based on the alleged breach of confidentiality regarding her internal complaint of discrimination.110 The court held that because the alleged breach of confidentiality "did not result in a termination, demotion, reduction in salary . . . nor in any material change in terms and conditions of employment," it could not amount to an adverse action on which to base a successful retaliation claim.111 The employment-specific language indicated the court's adherence to a much narrower standard than that articulated by the Supreme Court in *White*.

A similar result ensued in the case of *Mintzmyer v. Babbitt*.112 Following a bench trial on the plaintiff's employment discrimination and retaliation claims, the District Court for the District of Columbia rejected the theory that disclosure of a confidential internal complaint of discrimination could anchor an actionable Title VII retaliation claim.113 The plaintiff, a decorated and successful regional director for the National Park Service, filed an allegation of discrimination with the Park Service under both Title VII and the Age Discrimination in Employment Act, claiming that the deputy director of the Agency discriminated against her unlawfully.114 Mintzmyer alleged that after she filed her complaint, the deputy director met with a friend of the plaintiff who previously worked for the Agency and who—at the time of the meeting with the deputy director—was working as a staff member for the Majority on the House Subcommittee on Parks and Insular Affairs, which was responsible for funding allocation to the Parks Service.115 During the meeting, the deputy director informed the plaintiff's friend of the plaintiff's complaint and asked her to

110. See id. at *6-7.
111. Id. at *7.
113. Id. at *55–56.
114. Id. at *1–3, *30.
115. Id. at *17–18.
appeal to the plaintiff to resolve the complaint without involving an attorney in the negotiations. The friend then did as the deputy director supposedly requested, meeting with Mintzmyer shortly after and relaying the deputy director’s offer: Mintzmyer could contact the director of the agency and could obtain a higher position at the Park Service if she informally resolved the complaint. She was embarrassed by this exchange. And, worse, when she took the offer and contacted the director to pursue her position, she discovered that the director had no knowledge of the proposed agreement.

Mintzmyer brought several claims against the Park Service, among them that the disclosure by the deputy director of her confidential discrimination complaint to her congressional staffer friend constituted unlawful retaliation under Title VII. The court declined to find that such a disclosure could be serious enough to amount to retaliation. However “professionally embarrass[ing]” and “improper,” the disclosure led to no actual adverse employment action against plaintiff at the Park Service. The Mintzmyer opinion clearly relied on an elevated, pre-White adverse action standard of retaliation that required a much greater connection between the alleged wrong and the plaintiff’s employment than the standard articulated by the Supreme Court in White. Given the court’s acknowledgment of the wrongful and embarrassing nature of the disclosure, it may today find the opposite under the materially adverse action standard laid out in White.

Numerous other cases do not specifically mention a higher standard than the one announced in White; however, in all but one pre-White case, courts rejected the theory that disclosure of one’s discrimination complaint was a valid basis for a retaliation claim. We discuss the cases that reject the theory first, followed by the exception.

In Dunn v. Washington County Hospital, the plaintiff, a nurse in a public hospital, brought an action alleging that her employer was liable for sexual harassment and retaliation against her by an independent contractor physician with whom she worked. Among

the nurse’s complaints were that the physician harassed her in retaliation for complaining about his behavior, meaning that he was made aware of her complaints in a manner that did not protect her.124 While the majority found no actionable wrong in her averments, Judge Rovner dissented, noting that after the plaintiff and other nurses complained, they submitted to interviews by the hospital’s counsel.125 They each expressed concern about the damage their complaints could do to their relationship with the hospital and the physician, and each was assured confidentiality.126 Yet it was not long, the dissent explained, before the hospital turned the nurses’ statements over to the physician, who taunted the plaintiff, telling her, for example, that “paybacks are hell.”127 Given these circumstances, Judge Rovner would have found that the disclosure of the complaints and the identity of those complaining could constitute sufficient action on which to base a retaliation claim within the purview of Title VII.128

In Ross v. Communications Satellite Corp.,129 a plaintiff engineer brought a sexual harassment charge against his employer based on alleged discrimination by a female technician. When the company did not resolve the matter to his satisfaction, he filed an EEOC charge.130 The company published a short article about the charge in its internal company news digest.131 The plaintiff eventually brought a slew of claims alleging, among other things, that the company retaliated against him by publishing the article disclosing his charge and identity.132 While the EEOC found cause for the retaliation claim, the district court rejected it on the grounds that the article was truthful.133 The Fourth Circuit reversed the district court’s grant of summary judgment for the company, but omitted substantive discussion on the merits of the retaliation claim.134

Notably, at least one court has commented that the disclosure of an EEOC charge of discrimination to the accused’s supervisor cannot

warrant a breach of confidentiality rising to the level of an actionable adverse action under Title VII, stating that such disclosure is "an integral part of the disciplinary process." To the extent that the foregoing cases are based not on a faulty standard but instead on this kind of practical rationale, they may be relevant to post-White jurisprudence. The reasoning in these cases on the point of whether disclosure amounts to actionable retaliation is minimal, however. It is difficult to discern the extent to which those opinions relied on a now-defunct and exceedingly high adverse action standard.

In the sole pre-White case to find disclosure of a complaint could constitute an actionable retaliatory action under Title VII, Lafate v. Chase Manhattan Bank, the court declined to set aside a verdict in favor of a Title VII retaliation plaintiff alleging, among other things, that her employer unnecessarily disclosed details of her EEOC charge. The plaintiff filed a charge after being denied a promotion to which she believed she was entitled. She eventually filed a suit alleging retaliation as well, and a jury found in her favor. The trial court rejected the employer’s argument that the plaintiff failed to offer evidence sufficient to demonstrate an adverse action under Title VII’s retaliation framework. By moving the employee to a less comfortable workspace, assigning her a task she was untrained to complete, and “most importantly,” by filing plaintiff’s EEOC charges in her personnel file, an act that gave four of her managers access to the documents, the employer had, indeed, committed a materially adverse employment action on which a Title VII retaliation claim could be based. By grouping these allegations together, the court’s decision left some ambiguity as to whether the disclosure, if taken alone, would have constituted an adverse action. Nonetheless, the court’s characterization of this error as “most important” suggests that in another case, such an outcome may be possible.

136. Part V addresses how these and related issues might be incorporated into this Article’s retaliatory disclosure framework.
138. Id. at 779.

143. Id. at 778–79.
2. Post-White Cases Addressing Whether Disclosure Is Actionable

The pre-White retaliatory disclosure cases show that no coherent approach to retaliatory disclosure claims was emerging in the earlier case law. Thus, it is unnecessary to look to cases decided subsequent to the newer standard White articulated to determine if it provides employers with guidance as to when they may not disclose the existence of a complaint of discrimination or the identity of the complainant. The review of the newer case law provides no clearer an answer.

At least initially, post-White cases have only addressed discrete issues on a seemingly ad hoc basis and do not provide the necessary direction. In Bowman-Farrell v. Cooperative Education Service Agency 8,144 the District Court for the Eastern District of Wisconsin rejected a plaintiff's Title VII claim that her public employer retaliated against her by disclosing to a complained-of party certain unnamed details of the plaintiff's discrimination allegations.145 Although Bowman-Farrell was decided after White, the court's disposition of other retaliation claims on the grounds that they did not cause an adverse employment action indicates that the court was operating under a pre-White standard.146 The court seemed to mandate a more substantial link to employment, a link clearly absent from the requirements in White.147 Without significant discussion of the standard, however, the court granted summary judgment on the plaintiff's retaliatory disclosure claim, explaining that "presumably at some point in a retaliation complaint the accused is going to learn the details of the complaint against her."148

But two cases following White more directly and substantially address the question of when employer disclosure of a discrimination complaint can rise to the level of retaliation under Title VII. The recent opinion by the Tennessee Supreme Court in Allen v. McPhee149 may shed light on how an employer might respond to a charge of discrimination in the public eye without incurring retaliation against the charging party.150

149. 240 S.W.3d 803 (Tenn. 2007), abrogated by Gossett v. Tractor Supply Co., 320 S.W.3d 777 (Tenn. 2010).
150. Although Allen v. McPhee is a state case interpreting the Tennessee Human Rights Act (THRA), the framework for establishing a prima facie retaliation claim under the THRA mirrors that under Title VII, requiring (1) a known protected activity, (2) a
The plaintiff in *Allen*, who worked in a university president's office, filed complaints with the Tennessee Board of Regents alleging that she was subjected to sexual harassment by the president himself. Following the allegations, the president issued two press releases acknowledging that he was the subject of sexual harassment complaints by an employee of the university and denying the allegations. He additionally granted an interview to the university's student newspaper, during which he vehemently denied the allegations against him and characterized the complaints as false accusations. The plaintiff alleged that the president's public discussion of her allegations and his puffery-style denial and denigration of the charges against him amounted to retaliation under the Tennessee Human Rights Act ("THRA"). Noting that none of the public statements identified her by name or otherwise provided information leading to the discovery of her identity, the court rejected her theory.

The court's decision in *Allen* sheds light on how a federal court might interpret a claim regarding disclosure of a confidential complaint. The court's analysis recognizes as reasonable an accused's desire to refute allegations of discrimination and, by negative

---

 materially adverse action, and (3) a causal connection between the two. *Id.* at 807. And, significantly, the THRA applies the White standard to the "materially adverse action" prong of the retaliation test, allowing a retaliation claim anchored on an act unrelated to employment if it has the requisite objectively identifiable deterrent effect on protected activity. See *id.* at 820–21.

151. *Id.* at 809.
152. *Id.* at 810–11.
153. *Id.* at 811.
154. *Id.* at 824.
155. The court explained:

Although both press releases imply that [the president] was being falsely accused of sexual harassment and were arguably intended to curry favor with the public, this alone is insufficient to support a finding that the press releases were materially adverse to [the plaintiff]. We are unwilling to hold that a person accused of sexual harassment necessarily exposes himself to liability for retaliation merely by asserting his innocence publicly. A reasonable employee would expect that a person accused of harassment will oppose the accusation. This is no less true of public figures who, as a result of their public status, will be expected to respond to the accusations publicly. While public figures do not have license to use their status to bully or embarrass their accuser, we hold that a reasonable employee would not be dissuaded from reporting discrimination based solely on the fact that the accused will publicly assert his innocence. Because the press releases are essentially limited to statements that imply [the president]'s innocence, we conclude that the issuance of the press releases was not materially adverse to [the plaintiff].

*Id.*
imputation, hints that disclosure of the name of a charging party might tread impermissibly into the domain of the materially adverse action.\textsuperscript{156}

Most recently, in \textit{Franklin v. Local 2 of the Sheet Metal Workers International Ass'n},\textsuperscript{157} the Eighth Circuit Court of Appeals confronted the question of whether revelation of a charge and the identity of a charging party amounts to retaliation under Title VII.\textsuperscript{158} In \textit{Franklin}, several members of the Sheet Metal Workers' union filed charges with their local EEOC office alleging that the union's referral practices were racially discriminatory.\textsuperscript{159} Shortly thereafter, the union began posting its legal bills relating to the charges for all to see.\textsuperscript{160} The bills detailed the charging parties' names and some of their allegations.\textsuperscript{161} The charging parties filed another charge based on the posting practice, alleging it amounted to unlawful retaliation.\textsuperscript{162} The EEOC agreed.\textsuperscript{163} In response to criticism from the EEOC, the union continued to post the bills but redacted the charging parties' names.\textsuperscript{164} The union, however, continued to read aloud information from the bills, including the names, during union meetings.\textsuperscript{165} The district court granted summary judgment for the union on the retaliation claims, finding that although the posting of the names was actionable under Title VII, the union had a non-retaliatory reason for its postings—namely, the duty to inform its members about the basis for its legal expenditures and to obtain members' approval for such expenditures.\textsuperscript{166}

The Eighth Circuit reversed.\textsuperscript{167} The postings and name-reading at meetings did amount to adverse actions within the meaning of Title VII's retaliation provisions after \textit{White}, the court explained.\textsuperscript{168} However, the court rejected the plaintiffs' argument that the public revelation and posting of information regarding the existence of their

\textsuperscript{156} \textit{Id.} (noting that the press releases did not identify the plaintiff complainant by name or provide sufficient information to lead others to easily identify her).

\textsuperscript{168} \textit{Id.}
charges and their identities was "per se" retaliatory. Given the union's duty to obtain approval for legal fees, the court explained, the posting alone could not fairly amount to per se retaliation. However, reversing the district court's grant of summary judgment for the union, the Eighth Circuit found that some of the union's actions—such as announcing the plaintiffs' names at the meetings—might have published the plaintiffs' identities more widely than necessary. Given that detail, the court explained, a genuine issue of fact remained regarding the retaliation claim that precluded summary judgment being entered on that claim.

The cases decided prior to White no longer seem to be instructive in light of the clarified adverse action standard provided in White. Those decided after White—though perhaps instructive in building the various constituent parts—provide little in the way of a well-developed framework to guide employers or courts faced with claims of retaliatory disclosure. Thus, we look elsewhere for additional guidance to fashion such a framework.

### III. Alternative Sources of Guidance

The fact is that some disclosure of charging party identity is likely necessary in some cases. Nevertheless, it is equally clear that widespread disclosure of the charging party's identity—or even the threat of such disclosure—can be coercive and may, in some circumstances, lead a would-be charging party to abandon his or her claim. The retaliation case law provides insufficient guidance in drawing the line between permissible and retaliatory disclosure. In addition, the nondisclosure and confidentiality requirements otherwise active when a charge of discrimination is filed with the EEOC are inapplicable. As a result, a court applying the White "dissuade a reasonable worker" standard will need to look elsewhere for guidance in retaliatory disclosure cases. We discuss two sources of such guidance in this Section: federal courts' standards to determine when a litigant can proceed under a pseudonym and social science research regarding whistle-blowing employees.

170. Id. at 521.
171. See id. ("Local 2 continued to read Appellant's names at union meetings. Although Local 2's prior practice and obligation to disclose expenses may justify what Local 2 did, the degree of Local 2's disclosures raises credibility issues and a potential reasonable inference of retaliation.").
172. Id.
A. Anonymity/Pseudonymity in Litigation

As we have noted, the Title VII charge process is neither wholly public nor wholly private. In federal courts, litigation is generally public. Litigants are rarely allowed to proceed anonymously. Given that context, understanding the circumstances and countervailing interests at play when the public nature of litigation gives way is helpful to delineating the parameters of retaliatory disclosure. Anonymity runs afoul of both the public's common law right to access judicial proceedings173 and Federal Rule of Civil Procedure 10(a), which states that the title of every complaint shall "include the names of all the parties."174 However, many federal courts permit parties to proceed anonymously when weighty circumstances justify secrecy.175

173. See Does I thru XXIII v. Advanced Textile Corp., 214 F.3d 1058, 1067 (9th Cir. 2000); see also Nixon v. Warner Commc'ns, Inc., 435 U.S. 589, 596 (1978) (noting the "common-law privilege to inspect . . . judicial records").

174. See FED. R. CIV. P. 10(a) ("Every pleading shall contain a caption setting forth the name of the court, the title of the action, the file number, and a designation as in Rule 7(a). In the complaint the title of the action shall include the names of all the parties, but in other pleadings it is sufficient to state the name of the first party on each side with an appropriate indication of other parties.").

175. See, e.g., Advanced Textile Corp., 214 F.3d at 1062-63 (allowing Chinese plaintiffs to proceed pseudonymously because they otherwise risked losing their jobs, being burdened with debt, and being deported to China, where they would risk imprisonment); Doe v. Blue Cross & Blue Shield United of Wis., 112 F.3d 869, 872 (7th Cir. 1997) ("There are exceptions. Records or parts of records are sometimes sealed for good reasons, including the protection of state secrets, trade secrets, and informers; and fictitious names are allowed when necessary to protect the privacy of children, rape victims, and other particularly vulnerable parties or witnesses. But the fact that a case involves a medical issue is not a sufficient reason for allowing the use of a fictitious name, even though many people are understandably secretive about their medical problems."); James v. Jacobson, 6 F.3d 233, 238-39 (4th Cir. 1993) (noting that anonymity is not warranted based on the desire to avoid "annoyance" or "criticism," but may be warranted based on preservation of privacy of information of a "highly personal nature," the threat of "physical or mental harm" to the plaintiff or an innocent third party, or the age of the plaintiff); Doe v. INS, 867 F.2d 285, 286 n.1 (6th Cir. 1989); Doe v. Stegall, 653 F.2d 180, 186 (5th Cir. 1981) (allowing plaintiffs who were challenging school prayer to proceed under pseudonym because they risked harassment and they were forced to disclose personal, private information in the challenge); Moe v. Dinkins, 533 F. Supp. 623, 627 (S.D.N.Y. 1981) (identifying "marriage and illegitimacy" as highly sensitive and personal information that may warrant allowing a plaintiff to proceed anonymously), aff'd, 669 F.2d 67 (2d Cir. 1982); see also Doe v. Bell Atl. Bus. Sys. Servs., Inc., 162 F.R.D. 418, 420 (D. Mass. 1995) ("Courts have allowed plaintiffs to proceed anonymously in cases involving social stigmatization, real danger of physical harm, or where the injury litigated against would occur as a result of the disclosure of plaintiff's identity. Economic harm or mere embarrassment are [sic] not sufficient to override the strong public interest in disclosure. Cases in which parties are allowed to proceed anonymously because of privacy interests often involve abortion, mental illness, personal safety, homosexuality, transsexuality and illegitimate, or abandoned children in welfare cases." (citations omitted) (internal quotation marks omitted)).
A review of federal court decisions reveals that there are three main situations in which a plaintiff may proceed anonymously: (1) when identification creates a risk of retaliatory physical or mental harm;\(^{176}\) (2) when anonymity is necessary “to preserve privacy in a matter of sensitive and highly personal nature”;\(^ {177}\) and (3) when the anonymous party is “compelled to admit [his or her] intention to engage in illegal conduct, thereby risking criminal prosecution.”\(^{178}\)

Two of these three situations—where identification creates a risk of retaliatory physical or mental harm and where the matter is sensitive or highly personal in nature—implicate interests analogous to those of plaintiffs in retaliatory disclosure claims. The following Sections outline in more detail federal court rulings in these two situations and shed light on how courts can fashion protection for Title VII complainants against retaliatory disclosure.

1. Privacy

Courts often consider an individual’s right to privacy as a critical factor in determining whether she can proceed anonymously. Sometimes, however, it is difficult to parse whether the nature of the private matter or the possibility of embarrassment and potential for ostracism are the motivating factors in the court’s determination. For example, particular cases involving challenges to religious practices often receive special protection,\(^ {179}\) while situations involving sexual harassment claims and sexual assaults do not.\(^ {180}\)

   a. Matters Involving Religion

Courts appear more willing to protect an individual’s identity when the individual is challenging particular religious practices. This heightened protection is more common in communities with strong religious convictions where challenges to the religion subject the

\(^{177}\) James, 6 F.3d at 238; see also Doc v. Deschamps, 64 F.R.D. 652, 653 (D. Mont. 1974) (discussing the same); Doe v. United Servs. Life Ins. Co., 123 F.R.D. 437, 439 (S.D.N.Y. 1988) (discussing the “special circumstance[]” of protecting “privacy in a very private manner” (citations omitted)).

\(^{178}\) Stegall, 653 F.2d at 185.

\(^{179}\) See, e.g., Doe v. Harlan Cnty. Sch. Dist., 96 F. Supp. 2d 667, 670–71 (E.D. Ky. 2000) (involving parents of a minor child who were permitted to proceed pseudonymously in challenging the school district’s practice of hanging the Ten Commandments in schools because the plaintiffs could be subject to humiliation and harassment).

plaintiff to widespread and hostile ridicule by a unified group. A similar situation of widespread ostracism is likely not the case in sexual harassment situations because there is likely no identified group hostile to the putative victim.

In *Doe v. Stegall*, the court determined that the plaintiffs challenging prayer in school could proceed anonymously. The court explained:

Here, the Does complain of public manifestations of religious belief; religion is perhaps the quintessentially private matter. Although they do not confess either illegal acts or purposes, the Does have, by filing suit, made revelations about their personal beliefs and practices that are shown to have invited an opprobrium analogous to the infamy associated with criminal behavior. Evidence on the record indicates that the Does may expect extensive harassment and perhaps even violent reprisals if their identities are disclosed to a Rankin County community hostile to the viewpoint reflected in plaintiffs' complaint.

Similarly, in *Doe v. Harlan County School District*, parents of a child attending middle school in Kentucky were permitted to proceed pseudonymously when they challenged the school district's practice of hanging the Ten Commandments in classrooms. The court stated:

In a similar case, the Fifth Circuit held that the showing of possible harm, the risk of serious social ostracization based upon religious attitudes, and the fundamentally private nature of religious beliefs required that a child litigant remain anonymous. Because this case also involves a religious matter, a child litigant, and a community which is highly interested in this issue's resolution, a balancing of interests justifies the plaintiffs' continued anonymity.

These cases suggest that the sensitive nature of religious objection, especially when unpopular, may be sufficiently weighty to overcome the presumption in favor of naming parties in a case. But it cannot be ignored that the cases pertain centrally to religious challenges of children, and so it must be considered that the courts' recognition of the need for privacy is heavily influenced by the tender

b. Matters Involving Sexuality and Abortion

In matters involving sexuality, courts seem willing to protect individuals' privacy. For example, several courts have allowed transsexuals to sue under pseudonyms.\textsuperscript{187} In addition, a court has acknowledged that an individual has a right to have his identity protected if the case will reveal that he is a homosexual.\textsuperscript{188} The court asserted that while lawsuits are typically public events in which the public has an interest, keeping the plaintiff's sexual identity private was necessary to protect his privacy in light of the widespread public fear engendered by AIDS.\textsuperscript{189}

It is no surprise that courts are also sensitive to anonymity concerns in matters involving abortion. Courts are willing to allow pregnant women bringing actions to contest the validity of laws and regulations involving abortions to proceed anonymously.\textsuperscript{190} Furthermore, the Supreme Court implicitly endorsed anonymity in several important abortion cases including \textit{Roe v. Wade}\textsuperscript{191} and \textit{Doe v. Bolton}.\textsuperscript{192} In addition, the Court has allowed anonymity in a birth control case, \textit{Poe v. Ullman}.\textsuperscript{193} That said, however, in \textit{M.M. v. Zavaras},\textsuperscript{194} a district court would not allow an inmate to proceed

\textsuperscript{187} See McClure v. Harris, 503 F. Supp. 409, 412 & n.3 (N.D. Cal. 1980) (allowing plaintiff who was seeking insurance coverage for gender reassignment surgery to proceed as "Ann Doe"), rev'd on other grounds sub nom. Schweiker v. McClure, 456 U.S. 188 (1982); Doe v. Alexander, 510 F. Supp. 900, 902 (D. Minn. 1981) (invoking applicant for commission as an army reserve officer who was rejected due to her prior gender reassignment surgery); Doe v. McConn, 489 F. Supp. 76, 77 (S.D. Tex. 1980). In McConn the court explained that "[t]he Jane Doe Plaintiffs and Plaintiff M.B., in various stages of sexual transition, are suing under fictitious names to insulate themselves from possible harassment, to protect their privacy, and to protect themselves from prosecution resulting from this action." \textit{Id.} at 77.

\textsuperscript{189} \textit{Id.} ("Concern to avoid public identification as a homosexual is heightened in light of the widespread public fear engendered by the Acquired Immunodeficiency Syndrome ('AIDS') crisis."). Of course we may now find that the court's specific reasoning incorporated antiquated notions about homosexuality and AIDS; nevertheless, the court was animated by its evaluation of the possibility that the facts of the case presented some risk of social stigma. \textit{See id.} That concern, even if not its particular application in this case, appears to be timeless.

\textsuperscript{191} 410 U.S. 113 (1973).

\textsuperscript{192} 410 U.S. 179 (1973).

\textsuperscript{193} 367 U.S. 497 (1961).

under a pseudonym when she sought to compel the state department of corrections to pay for her abortion because the court reasoned that the public’s interest in the use of public funds outweighed the inmate’s interest in anonymity.\footnote{Id. at 802.}

c. Matters Involving Sexual Harassment and Sexual Assault

Sexual assault and sexual harassment claims have typically received the least amount of anonymity protection, though case outcomes in this area are mixed.\footnote{See, e.g., Doe v. Bell Atl. Business Sys. Servs., Inc., 162 F.R.D. 418, 420–21 (D. Mass. 1995); Doe v. Hallock, 119 F.R.D. 640, 640–41 (S.D. Miss. 1987); see also S. Methodist Univ. Ass’n of Women Law Students v. Wynne & Jaffe, 599 F.2d 707, 707 (5th Cir. 1979) (involving a claim for sexual discrimination).} In Doe v. Bell Atlantic Business Systems Services, Inc.,\footnote{Id. at 422.} a Massachusetts district court would not allow a plaintiff who alleged that she had been sexually harassed and assaulted by her work supervisor to file pseudonymously.\footnote{Id. at 420.} The court held that “[e]conomic harm or mere embarrassment are [sic] not sufficient” to warrant anonymity.\footnote{Id. at 422.} It further held that the plaintiff had not demonstrated a compelling need for privacy that outweighed the rights of the defendant and the public to open proceedings.\footnote{Id. at 422.}

More recently, in Doe v. Penzato,\footnote{No. CV10-5154 MEJ, 2011 U.S. Dist. LEXIS 51681 (N.D. Cal. May 13, 2011).} the Northern District of California granted a plaintiff’s request to proceed under a pseudonym in her case alleging that the defendants, a couple in whose U.S. home she lived and worked, subjected her to human trafficking, forced labor, and sexual assault.\footnote{Id. at *2–3.} The court agreed with defendants that the plaintiff had evidenced little reasonable fear of retaliatory reprisal.\footnote{See id. at *9.} But, in finding that anonymity was appropriate, the court accepted the plaintiff’s claims that revelation of her identity in open pleadings would subject her to psychological trauma and an invasion of her privacy.\footnote{Id. at *12–13.} Finally, the court was persuaded that the public interest in encouraging victims of human trafficking to come forward—an interest that would be harmed, the plaintiff alleged, if victims were forced to reveal their identities—weighed in favor of plaintiff anonymity.\footnote{Id. at 802.}
In comparing cases involving abortion and cases involving sexual harassment or assault, it appears that some courts are likely to find that pregnant women challenging abortion laws deserve more privacy protection than victims of sexual harassment or assault because of both the extremely private nature of abortion and the potential for public ridicule. This view might exist because sexual harassment and assault cases always involve another or several other people, so the victim has already lost some privacy as a matter of course. Furthermore, the public might be more critical of a woman challenging an abortion law than a victim of sexual harassment or assault. Yet there is some support, anchored by the public interest in encouraging reports of sexual assault, perhaps, for providing alleged victims anonymity in pursuing alleged perpetrators.

2. Fear of Reprisal

Fear of reprisal or retribution can be a critical factor in determining whether anonymity is required. "That a plaintiff may suffer embarrassment or economic harm is not enough" to warrant use of a pseudonym. Rather, a plaintiff must convince the court that he is in danger of real harm. In cases involving the threat of physical retribution, courts usually rule in favor of those seeking

206. Throughout the remainder of this Article, we use the words "reprisal" or "retribution" to refer to acts carried out against an individual that are detrimental to that individual. These types of actions might constitute the materially adverse action in a retaliation claim as described supra in Part I.B, but are broader than that as well. We choose not to use the term "retaliation" in its colloquial sense to avoid confusion; we use "retaliation" only in reference to the legal claim. Our use of "reprisal" and "retribution" reflects the broad definition of retaliation in the whistleblowing literature. See, e.g., Michael T. Rehg et al., Antecedents and Outcomes of Retaliation Against Whistleblowers: Gender Differences and Power Relationships, 19 ORG. SCI. 221, 222 (2008) ("[R]etaliation against whistleblowers represents an outcome of a conflict between an organization and its employee, in which members of the organization attempt to control the employee by threatening to take, or actually taking, an action that is detrimental to the well-being of the employee, in response to the employee's reporting, through internal or external channels, a perceived wrongful action.") (quoting Michael T. Rehg, An Examination of the Retaliation Process Against Whistle-Blowers: A Study of Federal Government Employees 17 (June 29, 1998) (unpublished Ph.D. dissertation, Indiana University) (on file with the North Carolina Law Review))). The literature treats reprisal and retaliation as including both the imposition of negative consequences and the withholding of positive benefits to the whistleblower. See, e.g., John P. Keenan, Comparing Indian and American Managers on Whistleblowing, 14 EMP. RESPS. & RTS. J. 79, 82 (2002) ("Reprisal involves taking an undesirable action against an employee or not taking a desirable action because that employee disclosed information about a serious problem."). We do as well.

207. Doe v. Megless, 654 F.3d 404, 408 (3d Cir. 2011).
208. Id.
anonymity. For example, in *EEOC v. ABM Industries Inc.*, the court allowed eight employees to intervene anonymously in a Title VII action brought by the EEOC against an employer because the employees had an objectively reasonable fear that their supervisor would physically threaten or harm them. The employees’ need for anonymity outweighed any prejudice to defendants and the public’s interest in knowing their identities.

On borderline retribution cases, however, courts have diverged greatly. For example, in the seminal case of *Southern Methodist University Ass’n of Women Law Students v. Wynne & Jaffe*, the court found that the possibility of humiliation and reprisal was not sufficient to warrant anonymity in a sexual discrimination case, because the plaintiffs—female law students and lawyers—faced no greater threat of reprisal than a typical plaintiff alleging civil rights violations. The court was unsympathetic to the plaintiffs’ argument that disclosure of their identities would leave them vulnerable to retribution from their current employers, prospective future employers, and the organized bar. In addition, in *Doe v. Hallock*, a sexual harassment and sexual assault case, the court found that the plaintiff had “not demonstrated that this is an exceptional case in which a compelling need exists to protect an important safety or privacy interest.” The court reasoned that such reprisal was more likely to come from defendants, who already knew the victim’s identity, rather than from the community at large. Therefore, fear of reprisal did not support the need for anonymity. Yet, in *Doe v. Stegall*, the court found that a mother and her two children could proceed anonymously because their suit, which challenged the constitutionality of prayer and Bible-reading exercises in Mississippi

209. See, e.g., United States v. Doe, 655 F.2d 920, 922 n.1 (9th Cir. 1981) (using pseudonyms in opinion because appellant, a prison inmate, “faced a risk of serious bodily harm” if his role as a government witness were disclosed).

public schools, would likely lead to harassment and possible violence by members of their community.\footnote{220}{Id. at 186. Stegall also involved privacy issues concerning the Does' religious beliefs, see supra text accompanying note 183, and documentation of the physical threats to the plaintiffs in a local newspaper. Stegall, 653 F.2d at 182 n.6, 187.}

The Ninth Circuit has outlined the clearest standard for dealing with cases involving the threat of reprisal, evolving in two major steps over the course of a decade. It first considered the following factors in determining whether anonymity is necessary: "(1) the severity of the threatened harm; (2) the reasonableness of the anonymous party's fears; and (3) the anonymous party's vulnerability to such retaliation."\footnote{221}{Does I thru XXIII v. Advanced Textile Corp., 214 F.3d 1058, 1068 (9th Cir. 2000) (citations omitted).} In \textit{Does I thru XXIII v. Advanced Textile Corp.},\footnote{222}{Id.} the court found that the district court abused its discretion when it denied Chinese employees the ability to proceed anonymously.\footnote{223}{Id. at 1069.} The employees, on appeal, argued that if their identities were revealed, they could lose their jobs, be deported, be burdened with debts, and be imprisoned in China if unable to pay.\footnote{224}{Id. at 1071.} The court found that the threatened harms to the Chinese workers were reasonable given evidence of collaboration between labor contracting agencies and the Chinese government.\footnote{225}{Id.} In addition, the court found that the employers would suffer no prejudice from the plaintiffs' anonymity and that permitting use of pseudonyms would serve the public interest by allowing the suit to go forward, perhaps helping future plaintiffs.\footnote{226}{Id.}

The Ninth Circuit distinguished \textit{Advanced Textile Corp.} from \textit{Southern Methodist University Ass'n of Women Law Students} by pointing out that "[w]hile threats of termination and blacklisting are perhaps typical methods by which employers retaliate against employees who assert their legal rights, the consequences of this ordinary retaliation to plaintiffs are extraordinary."\footnote{227}{Id. at 1072-73.} In addition, the court made it clear that where there are threats of extraordinary retribution such as deportation, arrest, and imprisonment, plaintiffs do not need to prove threat of physical harm.\footnote{228}{Id.}
Circuit in *Advanced Textile Corp.*, it held ten years later in *Doe v. Kamehameha Schools* that consideration of a party’s request to proceed anonymously must also include the threat of prejudice to the opposing party and the public interest in freely available information. The addition of these factors reveals attention to interests beyond solely those of the plaintiff seeking anonymity.

**B. Social Science Research**

While the approach to anonymity in litigation provides the beginnings of a framework for evaluating claims of retaliatory disclosure, the reasonable employee standard announced in *White* requires us to seek additional guidance for implementing it. The goal is to fashion a standard that allows courts to separate disclosure that, although uncomfortable, is not an adverse action from disclosure that “could well dissuade a reasonable worker from making or supporting a charge of discrimination.” What courts determine a reasonable worker should withstand and what actually would dissuade a reasonable worker ought to have some basis in reality. Fortunately, a substantial body of social science research has begun to provide insight into how employees react to conflict and discrimination in the workplace. In this Section, we summarize some findings of this literature, which helps to develop the retaliatory disclosure framework we propose in the next Part.

Three important themes emerge from the social science literature: that the fear of reprisal, whether or not reprisal is actually likely, acts as a disincentive to whistleblowing; that whistleblowers are negatively viewed as a threat to existing social order; and that victims are often reluctant to think of themselves as such. They inform our inquiry and guide the development of the framework we describe in the next Part. We elaborate on each in turn.

---

229. 596 F.3d 1036 (9th Cir. 2010).
230. Id. at 1042.
231. See infra Part V for how we propose these interests can be incorporated into our retaliatory disclosure framework.
233. Professor Deborah L. Brake, in her seminal article on the promise and failures of the retaliation claim, first explicated the three themes. See Deborah L. Brake, *Retaliation*, 90 MINN. L. REV. 18, 25-42 (2005). For our discussion, we have reordered and expanded upon them with additional and updated research, as well as adapted them for the specific context of retaliatory disclosure. Nonetheless, Professor Brake’s excellent discussion served as a guide for our exploration of the social science literature.
1. Whistleblowers Perceptions and the Reality of Reprisal

First, the threat of reprisal for reporting wrongful acts creates a disincentive for victims to report them. This is true regardless of whether reprisals are carried out in fact. Studies support the common sense notion that would-be whistleblowers engage in a cost-benefit analysis when deciding whether to report wrongdoing. Those who report conclude that the potential benefits of doing so outweigh the potential costs. Those who remain silent come to the opposite conclusion. Thus, when an employee is confronted with the decision

234. For purposes of clarity and ease of reading, in this section we will refer to those who report the bad behavior of others, including employees who file charges of discrimination with the EEOC, as "whistleblowers." The definition of "whistleblower" in the social science literature is broader than the meaning sometimes used in the law. Most of the social science literature considers individuals who report wrongdoing for the purpose of creating organizational change to be whistleblowers, even if that reporting is nonpublic and even if the organizational change sought is solely for the whistleblower's personal gain (rather than for the benefit of the general public). See, e.g., Rehg et al., supra note 206, at 222 ("Following earlier research, we define whistle-blowing as 'the disclosure by organization members (former or current) of illegal, immoral or illegitimate practices under the control of their employers, to persons or organizations that may be able to effect action.'" (quoting Janet P. Near & Marcia P. Miceli, Organizational Dissidence: The Case of Whistle-Blowing, 4 J. BUS. ETHICS 1, 4 (1985)). See generally MARCIA P. MICELI, JANET P. NEAR & TERRY MOREHEAD DWORKIN, WHISTLE-BLOWING IN ORGANIZATIONS (2008) (providing a comprehensive overview of whistleblowing literature). Laws addressing whistleblowing sometimes give the impression that whistleblowers are more narrowly constituted of those who publicly disclose wrongdoing for the benefit of the general population. See, e.g., Whistleblower Protection Act of 1989, 5 U.S.C. § 2302 (2006 & Supp. 2010); False Claims Act, 31 U.S.C. §§ 3729-3733 (2006 & Supp. 2010).

235. But see Terry Morehead Dworkin, SOX and Whistleblowing, 105 MICH. L. REV. 1757, 1772 (2007) (arguing that "fear of retaliation is not dominant in preventing observers of wrongdoing from coming forward"). We do not argue that the threat of reprisal always stops a whistleblower, but rather that it can. Subsequent research supports the notion that, although threats of reprisal against a particular individual whistleblower tend not to deter that whistleblower from continuing with her complaint, they might deter subsequent potential whistleblowers. See Rehg et al., supra note 206, at 235–36.

236. See, e.g., Mark Keil et al., Toward a Theory of Whistleblowing Intentions: A Benefit-to-Cost Differential Perspective, 41 DECISION SCI. 787, 789, 804 (2010) (presenting a study of 159 information technology project managers who had been presented with multiple scenarios testing their whistleblowing intention and finding that would-be whistleblowers' calculation of the "benefit-to-cost differential" plays the "crucial mediating role" linking drivers of whistleblowing to whistleblowing intentions); cf. MARCIA P. MICELI & JANET P. NEAR, BLOWING THE WHISTLE: THE ORGANIZATIONAL AND LEGAL IMPLICATIONS FOR COMPANIES AND EMPLOYEES 4-15 (1992) (engaging in a cost-benefit analysis of the entire whistleblowing enterprise).

237. See Keil et al., supra note 236, at 805 ("[T]he key to creating an honest and open reporting environment is to keep the benefit-to-cost differential as high as possible for the individual by maximizing the benefits of reporting and/or minimizing the costs.").

238. See Paul Harvey, Mark J. Martiniko & Scott C. Douglas, Causal Perception and the Decision to Speak Up or Pipe Down, in VOICE AND SILENCE IN ORGANIZATIONS 63, 74
to report discrimination or file a charge, the analysis depends on expected chances of reprisal. Perceptions of the likelihood of retribution are just as important as the reality, if not more so.\textsuperscript{239} Those perceptions can include fears of not being believed; of reprisals like "reprimands, punitive transfers, threats, demotion, and dismissal";\textsuperscript{240} of embarrassment or humiliation; of slander and harassment; of social isolation; and of being labeled a troublemaker.\textsuperscript{241} These perceptions, though, are not wholly subjective or abstract. They are informed by a number of contextual factors that affect calculations that those fears will be realized.

The contextual factors are largely based on the characteristics of the institution, the wrongdoer, and the whistleblower herself. Institutional organization and structure have a strong influence on would-be whistleblowers' perceptions of the likelihood of reprisal and the actual likelihood of reprisal. For instance, if an individual perceives that previous whistleblowers in her organization have experienced reprisal, then she will be less likely to blow the whistle.\textsuperscript{242} Conversely, employees will be more likely to report wrongdoing in

\textsuperscript{239} See id. (naming the "extent to which observers expect to receive "rewards or punishments" and a general "fear of negative outcomes" as factors which may deter whistleblowers); Keil et al., supra note 236, at 790 (reviewing research suggesting that whistleblowers are inhibited from reporting by their "perceived risk of negative personal consequences" or "when [they] expect[] negative consequences").

\textsuperscript{240} Keil et al., supra note 236, at 788.

\textsuperscript{241} See Elizabeth H. Dodd et al., Respected or Rejected: Perceptions of Women Who Confront Sexist Remarks, 45 SEX ROLES 567, 569 (2001); Keil et al., supra note 236, at 788.

\textsuperscript{242} As noted supra note 235, there is evidence that the fear of reprisal against a whistleblower is not a significant source of deterrence for that whistleblower. See, e.g., Janet P. Near & Marcia P. Miceli, Whistle-Blowing: Myth and Reality, 22 J. MGMT. 507, 523 (1996) (reporting that results of large-scale surveys "indicate that most whistleblowers do not suffer retaliation and may not consider it an overwhelming determinant of their actions in deciding whether to report wrongdoing"). However, some studies indicate that the opposite is true, id. ("Results from case studies, however, lead to opposite conclusions ..."), and many continue to cite fear of reprisal as a deterrent to those who consider reporting an incident. See, e.g., Marissa S. Edwards, Neal M. Ashkanasy & John Gardner, Deciding to Speak Up or to Remain Silent Following Observed Wrongdoing: The Role of Discrete Emotions and Climate of Silence, in VOICE AND SILENCE IN ORGANIZATIONS 83, 94 (Jerald Greenberg & Marissa S. Edwards eds., 2009) ("[E]mpirical studies indicate that fear plays an important role in many employees' decisions to withhold information or concerns from their employers."). Scholars also do not rule out the possibility that reprisal against one employee will deter reporting by other employees in the future; many studies do not reach this issue. See, e.g., Rehg et al., supra note 206, at 235 ("We should note that retaliation may have had a chilling effect on other would-be whistleblowers, but we could not test this assumption with our data.").
organizations that have policies and procedures that create the impression that a whistleblower will be taken seriously and assisted. Otherwise, if an employee perceives that her organization tolerates—or, worse, relies on—wrongdoing, she likely will not complain. Moreover, institutions that are perceived to be hierarchical and authoritarian in structure create power dynamics that can more readily inhibit employees from blowing the whistle. As discussed in the next two paragraphs, power dynamics between the victim and the perpetrator affect whether wrongdoing is reported. The structure of an organization can create or exacerbate such power differentials.

In addition to institutional characteristics, the individual characteristics of the would-be whistleblower can affect both her perception of the chances for negative response to reporting and the reality that reprisal will occur if wrongdoing is reported. Those who have lower power within an organization are particularly vulnerable in this regard. That lack of power can result from several characteristics, including being a member of traditionally marginalized groups. Moreover, isolation can lead to low power, especially isolation from institutional powerbrokers.

Individuals who fit more than one of these characteristics are

243. See Harvey, Martinko & Douglas, supra note 238, at 73–74.
244. Cf. Miceli, Near & Dworkin, supra note 234, at 148–50 (explaining that the more dependent an organization has become on a particular wrongdoing, the less likely whistleblowing is to be effective).
245. See id. at 157 (“Organizations that are more hierarchical [sic], bureaucratic, or authoritarian may be less open to whistle-blowing challenges.”); Deborah Erdos Knapp et al., Determinants of Target Responses to Sexual Harassment: A Conceptual Framework, 22 ACAD. MGMT. REV. 687, 712 (1997) (“[O]ur framework and the supporting literature also indicate that the organization not only affects climate and policy issues but also has an impact on the formation of individual expectancies concerning the outcomes of responses to [sexual harassment].”).
246. See Rehg et al., supra note 206, at 224 (“Power and status generally are inversely related to retaliation, so that employees with lower power are more likely to suffer reprisal than those with greater power.” (citation omitted)).
247. See id. (explaining how status characteristic theory posits that status leads to influence and power and that “status within the workplace is somewhat influenced by status outside the workplace,” particularly noting that gender affects status outside the workplace).
248. See Miceli, Near & Dworkin, supra note 234, at 103 (“All other factors being equal[,] ... whistle-blowers with little power can be ignored or retaliated against more easily and with fewer negative consequences to the organization, than can those who hold high-level positions or have special expertise that is needed and hard to replace, who are well respected for their experience and competence.”); cf. Janet P. Near & Tamila C. Jensen, The Whistleblowing Process: Retaliation and Perceived Effectiveness, 10 WORK & OCCUPATIONS 3, 23 (1983) (finding that the “comprehensiveness of retaliation” as perceived by whistleblowers was greatest when the whistleblower likewise perceived a lack of support from top management).
particular likely to be subjected to reprisal and, thus, particularly likely to be silenced by the fear of reprisal. Take for instance, an African-American woman who is employed as the first and only female machine mechanic in a team of ten mechanics at a remote mining operation. She belongs to two demographic groups that have traditionally enjoyed lower institutional power status: African-Americans and women. She is also a pioneer; there are no other women mechanics. She is isolated demographically; however, she is also isolated geographically and relationally from the organization’s powerbrokers, who presumably reside in a less remote area and work at the corporate headquarters. She is extraordinarily vulnerable to reprisal and, thus, much more likely to remain silent. Supervisors, by contrast, tend to have more power to assist with their attempts to blow the whistle and thus are less likely to face retaliation in response to whistleblowing. Nevertheless, studies suggest that the elevation of supervisory status can be negatively overcome by other characteristics that create a power deficit (for example, being a woman or minority). Thus, even if the African-American woman in our hypothetical is promoted from line mechanic to a managerial position, her minority and female statuses may be more salient in dissuading her from reporting any discrimination than her newfound organizational power might be in providing her encouragement to blow the whistle.

The relative power between the victim and the perpetrator is also a contextual characteristic that affects both the perception and the reality of reprisal. The more powerful the perpetrator is within the

---

249. For instance, women who are “gender pioneers” in their particular positions or organizations are more likely to suffer marginalization, reprisal, and silencing. See MICELI, NEAR & DWORKIN, supra note 234, at 108; Lilia M. Cortina et al., What’s Gender Got To Do with It? Incivility in the Federal Courts, 27 LAW & SOC. INQUIRY 235, 244 (2002) (reporting on a study that showed female attorneys experienced more interpersonal mistreatment than their male counterparts); Knapp et al., supra note 245, at 704 (discussing the plight of gender pioneers in terms of organizational support).

250. Trailblazing women who enter professions traditionally occupied by men face a unique isolation: having violated the traditional social structure, they are placed under greater scrutiny to see if they “measure up” and are allowed little leeway when they deviate from authority or role expectations. Rehg et al., supra note 206, at 224.

251. See id.

252. See id. at 235 (“[F]emale whistleblowers received the same treatment regardless of the amount of organizational power they held: Their status as women overrode their status as powerful or powerless organization members.”).

253. Cf. Karl Aquino, How Employees Respond to Personal Offense: The Effects of Blame, Attribution, Victim Status and Gender Status on Revenge and Reconciliation in the Workplace, 86 J. APPLIED PSYCHOL. 52, 57 (2001) (finding that “employees were more willing to exact revenge against less powerful offenders”); Sung Hee Kim, Richard H.
organization, the less likely the organization is to address the subject of the complaint or any reprisal that follows reporting the perpetrator's wrongdoing, especially if the victim enjoys little institutional power. By contrast, where the perpetrator has relatively low power, the situation is more likely to be resolved without threat of or actual retaliation. Recent research reveals that power is often situational and particularistic, such that the power of the perpetrator or the victim may vary with the leverage they bring to the situation. For instance, a victim with low indicators of general power in an organization might enjoy greater power if the alleged wrongdoing is associated with her particular area of expertise or when the threat to her also threatens something of particular importance to the organization (for example, if she is an integral part of a team that is assigned to an important project with an impending deadline).

2. Whistleblowers' Challenge to Existing Social Hierarchies

It may or may not be true as a general matter that people often do not like complainers. More likely, people do not like complainers whose complaints challenge the dominant social order. Or more specifically, people who are the beneficiaries of the dominant social order really do not like complainers whose complaints challenge that order. Thus, when whistleblowers are in a position to present

Smith & Nancy L. Brigham, Effects of Power Imbalance and the Presence of Third Parties on Reactions to Harm: Upward and Downward Revenge, 24 PERSONALITY & SOC. PSYCHOL. BULL. 353, 353 (1998) ("Power asymmetries between parties in conflict can affect whether revenge will be carried out or suppressed." (citation omitted)). Revenge is a broader term than retaliation in the social science literature. Retaliation may be motivated by hoped-for revenge, but it does not have to be. Rehg et al., supra note 206, at 222.

254. See Miceli, NEAR & DWORKIN, supra note 234, at 103–04; Rehg et al., supra note 206, at 226.

255. See Kim, Smith & Brigham, supra note 253, at 354 (observing that people in low power situations tend to be more compliant and willing to make concessions during negotiations).

256. See Maria P. Miceli et al., Predicting Employee Reactions to Perceived Organizational Wrongdoing: Demoralization, Justice, Proactive Personality, and Whistle-Blowing, 65 HUM. REL. 923, 944 (2012) (detailing the first known study to support the proposition that particularized leverage is predictive of whistleblowing).

257. See id. at 931, 944.

258. See Faye J. Crosby, Why Complain?, J. SOC. ISSUES, Spring 1993, at 169, 170–71 (describing social norms that value suffering in silence and view complainers negatively); Robin E. Roy et al., If She's a Feminist It Must Not Be Discrimination: The Power of the Feminist Label on Observers' Attributions About a Sexist Event, 60 SEX ROLES 422, 423 (2009) ("Several studies indicate that observers have negative reactions toward people who indicate that they have been discriminated against or who call attention to prejudice.").
complaints that challenge the social order, they are stigmatized, isolated, and otherwise subject to reprisals.\footnote{259} This dynamic is especially harsh when it is combined with the tyranny of the majority. When a whistleblower confronts privilege and that privilege is widely shared by a dominant group, the group dynamics magnify the possibility and perception of cost to the whistleblower.\footnote{260}

Studies have shown that, for instance, men and white people react negatively to both women and people of color when they complain about unfair treatment.\footnote{261} Remarkably, that is true even when the complainant has strong evidence to support her claim—and even when evaluators are presented with that evidence and “believe” it.\footnote{262} Moreover, in a study in which negative race-related comments were confronted alternatively by white and black subjects, white observers rated the white confronter as more persuasive (and the comment as more biased) and the black confronter as simply rude (and the comment less biased), even though the confronters used the exact same script and responded to the same comment.\footnote{263} The implication is that the very fact of being a target of biased treatment will result in negative reactions to one who confronts the bias.\footnote{264}

In a study by Elizabeth Dodd and others where subjects observed women who confronted sexist remarks (some blatant, some more nuanced), the results showed that men reacted \textit{most} negatively to the women who confronted the blatant sexist remarks.\footnote{265} They were less harsh on the women who objected to the more ambiguous

\footnotesize{259. This tendency, as it relates to women, is explained in part by social role theory, which “predicts that the gender-based societal division of labor reduces the influence of women in work groups, regardless of their status, and that women who violate gender expectations will be sanctioned.”\textit{Miceli, Near & Dworkin, supra} note 234, at 108.

260. \textit{See Rehg et al., supra} note 206, at 228 (theorizing that women, especially when they are outnumbered by men, are more concerned about being labeled as a “troublemaker” as a result of whistleblowing and, thus, will try to avoid the imposition of that label).

261. For studies exemplifying this tendency, see generally Cheryl R. Kaiser & Carol T. Miller, \textit{Stop Complaining! The Social Costs of Making Attributions to Discrimination}, 27 PERSONALITY & SOC. PSYCHOL. BULL. 254 (2001); Heather M. Rasinski & Alexander M. Czopp, \textit{The Effect of Target Status on Witnesses’ Reactions to Confrontations of Bias}, 32 BASIC & APPLIED SOC. PSYCHOL. 8 (2010). Accord \textit{Miceli, Near & Dworkin, supra} note 234, at 106 (explicating a model of predictors and outcomes of retaliation in which reprisal is expected to be more comprehensive when the whistleblower is a member of a minority group).

262. \textit{See Kaiser & Miller, supra} note 261, at 262.

263. \textit{See Rasinski & Czopp, supra} note 261, at 8, 11.

264. \textit{Id.} at 9 (“People label targets as complainers when they claim that they have been the victim of discrimination.”).

265. \textit{Dodd et al., supra} note 241, at 572–73, 575.
The authors attributed this to a social penalty that privileged groups impose on role transgressors from marginalized groups. The social penalty is intended to maintain the dominant social order. The greater challenge to the social order came from the confrontation of the more direct expression of it (i.e., the blatant sexist comment). Thus, it merited the greater opprobrium from the dominant group.

Yet there is some hope for those who blow the whistle in that the research suggests that they may be able to seek out powerbrokers who share their demographic characteristics without suffering the same strong negative reactions. Notably, women observers in the Dodd study involving sexist remarks did not share this negative reaction. In fact, they reacted more positively to those who confronted the blatant sexism than those who did not. In general, the identity and demographic characteristics of the complaint recipient are important variables in the calculus of the whistleblower. Though transgressors have reason to fear reprisal from the dominant group, they may expect some greater level of support and encouragement from their compatriots. This is further borne out by studies that find whistleblowing more likely when whistleblowers can make private reports, especially when they can do so anonymously or to a complaint recipient who shares the salient characteristic that underlies the whistleblowers' complaint.

266. Id. at 575.

3. People’s Reluctance To Be Whistleblowers

The foregoing analysis of the social science related to whistleblowing and retaliation is built on a foundation that people fundamentally (and often unconsciously) avoid viewing themselves as victims. Thus, people of all types are reluctant to acknowledge and report discrimination of any kind. Part of that reluctance comes from the strong tendency we all have to internalize the reasons for our bad outcomes. Study subjects who failed tests, for example, were more likely to explain that failure by their own shortcomings than by any external factor, even when faced with evidence of bias by the test administrator, unless that evidence was unambiguous. This effect was once again multiplied when the dominant social hierarchy placed the victim in a position subordinate to that of the wrongdoer. When the discriminatory conduct of the wrongdoer is focused on a marginalized population in a given circumstance, say minority racial or religious groups or women, the tendency for internalization has consistently proven strong. Thus, the very act of protesting wrongdoing already is foreign to many of us. Just making the decision to blow the whistle, divorced from any perception or reality of reprisal, requires a significant departure from our typical way of viewing the world. Psychologically we are hampered by the “just world” hypothesis, which leads us to view the world as a place where we control our destinies and our merit or lack thereof determines our success. So, we distort our impressions of situations to blame

277. See Ruggiero & Taylor, supra note 276, at 374.

278. See id.

279. See Melvin J. Lerner, The Justice Motive: Some Hypotheses as to Its Origins and Forms, 45 J. PERSONALITY 1, 1–2 (1977). Lerner explains that people have an inherent, psychological desire to believe that the world is just and that, as a result, people get their just deserts and deserve whatever they get. Id. Thus, when confronted with an injustice visited upon an undeserving victim, observers will resort to cognitive reevaluation of the situation to realign it with their underlying belief in justice. The cognitive process through which this occurs is called “assimilation of injustice.” Claudia Dalbert, Belief in a Just World, in HANDBOOK OF INDIVIDUAL DIFFERENCES IN SOCIAL BEHAVIOR 288, 289 (Mark R. Leary & Rick H. Hoyle eds., 2009). This can manifest itself by the observer demonizing the victim. See Carolyn L. Hafer & Larent Bègue, Experimental Research on
ourselves, rather than others. And, then, even when we do recognize the wrongfulness of an action such as discriminatory treatment, we are less likely to report it than we might otherwise expect we are. People who have been subject to discriminatory behavior often employ coping strategies rather than confront the behavior.

Because we are reluctant to perceive ourselves as victims, and reluctant to report that victimization even if we do perceive it, the threat of reprisal of any kind is particularly troubling. Placing extra costs on identifying and reporting bad behavior is likely to magnify the fundamental tendency we all have to explain away bad behavior of others as more likely due to our own failures. Our inherent psychological makeup in this regard leads us to inaccurately evaluate the cost-benefit analysis discussed at the beginning of this Section. Thus, courts should be very careful not to use the White reasonable employee standard to undervalue the influence and effect of the perceived likelihood of reprisal. Those behaviors that "could well dissuade a reasonable worker from making or supporting a charge of discrimination" are likely broader than courts have thus far been willing to accept.

IV. A FRAMEWORK FOR IDENTIFYING RETALIATORY DISCLOSURE

Based on the Supreme Court’s guidance in White and the lower

---

Just-World Theory: Problems, Developments, and Future Challenges, 131 PSYCHOL. BULL. 128, 128–29 (2005); Melvin J. Lerner & Carolyn H. Simmons, Observer's Reaction to the "Innocent Victim": Compassion or Rejection?, 4 J. PERSONALITY & SOC. PSYCHOL. 203, 209 (1966) (finding that study subjects devalued the victim when they believed that the victim would continue to suffer and they could not alleviate that suffering through compensation). A strong belief in a just world has also been shown to lead to lower perceptions of personal discrimination. See Isaac M. Lipkus & Ilene C. Siegler, The Belief in a Just World and Perceptions of Discrimination, 127 J. PSYCHOL.: INTERDISCIPLINARY & APPLIED 465, 470 (1993) (finding a relationship between the belief in a just world and lower perceptions of personal sex, age, and religious discrimination).

282. See supra Part III.B.1.

courts’ interpretation of that decision, supplemented significantly by the two sources of guidance in Part III, we have developed the following framework that courts should utilize when determining if the employer’s disclosure of a complaining employee’s identity can be the basis of a valid retaliation claim. Though some disclosure of a complainant’s identity is inevitable and even desirable, as explained above, some types of broad disclosure surely are prompted by a retaliatory motive and have the likelihood of dissuading a reasonable employee from making such a claim. Complaining employees should have some expectation that they are not engaging in a wholly private process; however, some publications of a complaining employee’s identity and the details of the charge should be discouraged, because they will interfere with the remedial purpose of Title VII. In other words, such disclosures are prototypical materially adverse actions for which employers should face potential liability.

The framework we propose—like the doctrine it navigates—will not lead to easy, bright-line rulings. Instead, it provides a conceptual structure from which courts, litigants, and employers facing discrimination complaints may draw the salient considerations and balance them based on the totality of the circumstances in order to aid in the determination of whether a disclosure is truly retaliatory (i.e., whether it “could well dissuade a reasonable worker from making or supporting a charge of discrimination”\(^2\)).

We are initially guided by the approach the federal courts take to determining whether to allow a litigant to proceed anonymously. The two relevant considerations the courts use are concerns of privacy and fear of reprisal. We, likewise, identify two possible ways that disclosure might be retaliatory. Specifically, we suggest that disclosure of a complaining employee’s identity might be retaliatory based on (1) the primary effect of the disclosure itself or (2) the potential for secondary retaliatory actions that the disclosure makes more likely. Put another way, on one hand, a reasonable employee might be dissuaded from making a charge of discrimination simply because wide publication of the details of the charge would subject the employee to severe embarrassment, humiliation, or other invasion of privacy. We call this “primary retaliatory disclosure.”\(^3\) On the other

\(^2\) See supra Part II.A.2.

\(^3\) White, 548 U.S. at 57.

\(^4\) We note that primary retaliatory disclosure may have some overlap—but is not by necessity synonymous—with the theory behind the so-called “per se” retaliatory conduct that the plaintiffs argued for and the court rejected in Franklin v. Local 2 of the Sheet
hand, even if the details of the charge are not so salacious or potentially embarrassing to cause an employee to fear disclosure as a matter of general privacy or reputation, the disclosure of the charge details may sufficiently increase the likelihood of reprisal from those who learn about it such that the threat of those secondary effects would dissuade a reasonable employee from making a charge. We call this “secondary retaliatory disclosure.”

A. Primary Retaliatory Disclosure

Though we expect such circumstances to be less frequent, primary retaliatory disclosure could be based on privacy concerns, much like anonymity in federal courts. For example, an employee who is a minor and who was subjected to severe sexual harassment might be dissuaded from making a charge if she thought the details of the harassment would be widely publicized to her coworkers, her community, or her parents. Similarly, though outside the Title VII context, an employee with a disability might have a primary interest in avoiding wide dissemination of the details of his or her disability discrimination charge, which might compromise confidential medical information. While we do not presume to provide the exact contours of all the various situations under which a concern of primary retaliatory disclosure might arise, courts would be well-served to consult analogous cases addressing requests for anonymity in litigation. If, for example, a court would be likely to grant the charging party a request for anonymity if the charge proceeds to court, then the charging party ought to enjoy the same right to protection from publication and disclosure of her identity during the charge and investigation phase of the case. Moreover, in the litigation context the clear default legal standard is one of transparency, which has a strong normative underpinning as part of our long-standing civil processes. That contrasts with the legally ambiguous, quasi-public nature of the charge process, which is animated more by practical than normative concerns. Thus, a charging party ought to sometimes enjoy protection from retaliatory disclosure even when she would not be allowed to proceed anonymously should the charge result in a federal court case.

Applying this part of the framework to the Belmont Abbey case that introduced this paper, the charging parties would be unlikely to

Metal Workers International Ass'n, 565 F.3d 508, 520–21 (8th Cir. 2009). See supra text accompanying notes 169–70.
287. See supra text accompanying notes 173–74.
prevail on a retaliation claim based on primary retaliatory disclosure. Though the courts have granted litigants the right to proceed anonymously in litigation involving sensitive issues of religion and religious belief, those cases seem to be more motivated by the concerns we associate with secondary disclosure than with the humiliation, embarrassment, or invasion of privacy that marks the other classes of cases involving sexuality, sexual orientation, sexual assault, and the like. The anonymous litigants in the religion cases were often minors and were objecting to practices and beliefs that many in their communities held dear. Thus, they were more akin to the role transgressors described below. There is nothing particularly worrisome in this regard about the details of the Belmont Abbey charge.

B. Secondary Retaliatory Disclosure

As discussed above, federal courts also consider the possibility that a party will be subjected to retaliation or reprisal for his or her involvement in the litigation when determining if the party should be allowed to proceed anonymously. This is a concern animated not by the primary effect of the disclosure itself but by a concern that others will learn about the litigation and then take action of their own volition against the party as a result of that knowledge. The same concern is active here. As the social science literature revealed, whistleblowers are affected by their perception of the likelihood of reprisal. The concern is that others will learn about their complaint and cause them harm as a result. The more likely that is, the less likely it is the employee will blow the whistle on the wrongful behavior. Under some circumstances, an employer's disclosure of the identity of a charging party increases the perceived or actual likelihood of reprisal from those who learn about the charge such that a reasonable employee faced with that threat of disclosure would

288. See supra Part III.A.1.
289. See supra Part III.A.1.i.
290. Arguably, an implication of the charge might be that the charging parties were using birth control and family planning services that were no longer covered under the Belmont Abbey insurance plan. Certainly, there is a privacy interest in such decisions and practices, see generally Griswold v. Connecticut, 381 U.S. 479, 484-85 (1965) (finding a right to privacy in the U.S. Constitution, which protected a married couple's right to use contraceptives), but it is unlikely that the interest should outweigh what we consider to be the default rule that charging parties have no general right to expect their employers to keep their identities confidential.
291. See supra Part III.A.
292. See supra Part III.A.
293. See supra Part III.B.1.
forgo the opportunity to file the charge. The secondary effect—what others do with the information the disclosure provides—is the threat. Drawing the line between disclosures that are secondarily retaliatory and those that are not should involve a more detailed inquiry, balancing numerous factors that influence the likelihood of reprisal and the behavior of would-be whistleblowers.

Courts confronted with determining whether a disclosure of the charging party's identity was retaliatory should thus consider the effect that disclosure might reasonably have or might be perceived to cause. As a starting point, the Ninth Circuit's approach to determining when the threat of retaliation warrants anonymity is useful. That standard involves three factors: "(1) the severity of the threatened harm; (2) the reasonableness of the anonymous party's fears; and (3) the anonymous party's vulnerability to such retaliation."294 We adapt these three factors and add an additional one that is uniquely implicated by disclosures of charging party identity: the character or tone of the disclosure itself.295 We discuss how these factors should be employed in evaluating a claim of retaliatory disclosure, using the social science research detailed in Part III.B to supplement and expand.

1. Severity of Possible Reprisal

The severity of threatened or perceived harm that flows from a disclosure will affect how likely a disclosure would be to dissuade a reasonable employee from making a charge in the first place. Easy cases involve those where a specific threat of physical violence has been made against a previously anonymous charging party.296 Certainly a disclosure looks more retaliatory if an employee has reason to fear physical violence, assault, or intimidation should the

---

295. In Doe v. Kamehameha Schools/Bernice Pauahi Bishop Estate, 596 F.3d 1036 (9th Cir. 2010), the Ninth Circuit enumerated the two additional factors: the threat of prejudice to the opposing party and the public interest in freely available information. Id. at 1042 (citing Advanced Textile Corp., 214 F.3d at 1068). These factors, among other interests, are subsumed in our "need to know" balancing standard described infra Part V.
296. One could envision, for instance, a situation in which an employee files a charge of discrimination based on harassment by a coworker who, when confronted with the allegation, threatens to hurt or kill whoever filed the complaint. Disclosure of the identity of the complainant in such a situation raises the specter of severe harm. Though less arresting than this hypothetical example, the experience of the nurse-plaintiff in Dunn v. Washington County Hospital, 429 F.3d 689 (7th Cir. 2005), supports the claim as well. There, the nurse's complaint was brought to the attention of the allegedly offending doctor who warned her that "[p]aybacks are hell." Id. at 692.
details of the charge be disclosed. The *Advanced Textile* court, discussed previously, reasoned that this sort of extraordinary reprisal activity—which in that case included the possibility of prosecution and deportation—suggested anonymity was warranted.\(^{297}\) If the charge of discrimination alleges systemic racial or sexual harassment, for instance, disclosure would give the perpetrators a clear target for intimidation and violence. In contrast, some disclosure might upset a coworker or two, but realistically subject the charging party only to fairly benign social ostracism or isolated comments of disapproval. The latter would suggest the disclosure was not materially adverse. In between those two extremes, courts should consider issues suggested by the social science literature. For example, reactions tend to be stronger when a marginalized individual challenges the dominant social hierarchy directly.\(^{298}\) Thus, the more directly the charge of discrimination challenges powerful or entrenched interests in the workplace or its surrounding community, the more the reaction to it is likely to be extreme, particularly if the charge threatens to disrupt an established social hierarchy. Likewise, the severity of the possible reprisal increases as the charging party challenges the interests of a dominant group *qua* group. In such situations, the risk of groupthink influencing and escalating collective retaliatory activities is real. In contrast, a conflict that is uniquely situated between two coworkers or a supervisor and coworker is less likely to lead to severe reprisal (absent special characteristics of the perpetrator, such as mental illness or a history of violence).

Obviously, whether a reasonable employee would be dissuaded from filing a charge based on these threats of reprisal should be influenced by how dangerous or severe the perceived threat is. But even nonviolent, social threats might dissuade a reasonable employee from filing a charge if the threatened actions are highly likely to occur. In this way, courts confronting retaliatory disclosure claims would be well-served to call upon their experience with sexual harassment claims. Though a certain level of severity of harassing behavior is required for a claim to survive, less severe forms of harassment can form the basis of the claim the more pervasive they are.\(^{299}\) By analogy, the same holds true for cases of retaliatory

\(^{297}\) *Advanced Textile Corp.*, 214 F.3d at 1071; see also supra text accompanying notes 222–28 (discussing the case).

\(^{298}\) See supra Part III.B.2

\(^{299}\) See, e.g., Ellison v. Brady, 924 F.2d 872, 878 (9th Cir. 1991) (noting that severity and pervasiveness are inversely related in making determinations on sexual harassment claims); see also Laura D. Francis, Note, *What Part of “Hostile Environment” Don’t You
disclosure. The more likely a reprisal of any kind, the more likely it is to dissuade an employee from proceeding with a charge. Thus, we proceed to discuss the considerations courts should use to determine that likelihood.

2. Likelihood of Reprisal

In determining the likelihood of the threatened or feared reprisal and, as a result, the "reasonableness of the [charging] party’s fears," the social science research discussed above provides a framework for this analysis. Courts should look to characteristics of the organization, the perpetrator, and the complainant to determine this.

Organizational characteristics point to the likelihood of reprisal or at least the reasonableness of a charging party’s perception of that likelihood. Courts should consider the history, organizational structure, and homogeneity of the organization in evaluating retaliatory disclosure claims. Institutions with a history of retaliatory action or with a history of undermining the interests and efforts of whistleblowers are more likely to encourage or allow reprisals. Thus, charging parties who are employed by such institutions are justified in their fears, and courts should not easily dismiss the possibility that a disclosure from such an organization has a retaliatory motive. This makes prior charges of discrimination and claims of retaliation relevant to the retaliatory disclosure claim.

In addition, hierarchical organizations marked by authoritarian leadership structures increase the threat of disclosure, because such organizations are more likely to retaliate or tolerate retaliatory actions by coworkers. This is especially true if the charging party has challenged the hierarchy or a higher authority. Finally, homogeneous organizations are more likely to retaliate against an outlier, especially if the outlier challenges the orthodoxy shared by the rest of the members of the organization. For instance, the charging parties in the Belmont Abbey case challenged the orthodoxy of the shared beliefs of the religious college, which made them major transgressors and the potential targets of a unified group.

The characteristics of the perpetrator should also be a

302. See Rehg et al., supra note 206, at 227, 234–36.
consideration. To the extent the perpetrator is a powerful individual in the organization, the victim is less likely to be protected from reprisal and the disclosure more likely can be manipulated by the powerful perpetrator to discourage and intimidate the complainant. *Dunn v. Washington County Hospital* provides an illustrative example.\textsuperscript{303} There, the nurse who complained about the allegedly harassing behavior of the independent contractor physician with whom she worked was clearly at a power deficit both in social and organizational status as compared to the physician.\textsuperscript{304} The disclosure of her identity to the physician, coupled with his reaction, would reasonably be chilling to the nurse's or any subsequent victim's resolve.

Related to that, the characteristics of the complainant affect the likelihood of reprisal. The lower the power status of the complaining employee, the more likely he is to be subject to reprisal, especially if he is isolated from the organization's powerbrokers.\textsuperscript{305} When the complainant is a member of an outside group or otherwise a demographic outlier, this effect is exacerbated.\textsuperscript{306} When the employee is a pioneer (i.e., the “first” or “only” of his or her type working at a location or in a job), the reasonableness of the fear of reprisal is stronger.\textsuperscript{307}

\section*{3. Vulnerability of Employee}

The characteristics of the employee not only affect how likely reprisal is, but also how vulnerable to that reprisal he or she may be. The federal courts consider this in determining whether to allow a party to proceed anonymously. Children, for instance, are more vulnerable,\textsuperscript{308} as are victims of sexual assault.\textsuperscript{309} In this context, pioneers are not only more likely to be subject to reprisal, but are more likely to be vulnerable to its effects. They generally lack a support structure and are isolated from the power structure of the

\textsuperscript{303} See supra text accompanying notes 122–28 (describing the case).
\textsuperscript{304} See *Dunn v. Washington Cnty. Hosp.*, 429 F.3d 689, 694 (7th Cir. 2005) (Rovner, J., concurring in part and dissenting in part) (“*Dunn* posits that the Hospital sat on its hands while Coy harassed her because Coy, as its principal surgeon, was worth much more to the Hospital in revenue than she or any other nurse.”).
\textsuperscript{305} See supra notes 246–53 and accompanying text.
\textsuperscript{306} See supra notes 246–47 and accompanying text.
\textsuperscript{307} See supra notes 246–52 and accompanying text.
\textsuperscript{308} See supra Part III.A.1.a (discussing the vulnerability of children in the context of courts’ decisions to let litigants proceed anonymously).
\textsuperscript{309} See supra Part III.A.1.c (discussing courts’ mixed decisions to grant anonymity to victims of sexual assault).
organization. Individuals like the Belmont Abbey employees who reject the prevailing beliefs or attitudes of an otherwise unified workforce likewise are vulnerable.

The relative power of the employee in the organization (particularly in relation to the perpetrator) may make the employee more vulnerable. That is especially the case if coworkers and others have reason to rally around the perpetrator, either out of blind allegiance or out of the possibility of garnering favor with a powerful individual. Charging parties who lack power on multiple dimensions are the most vulnerable and are most likely dissuaded by the threat of disclosure.

4. Form and Tone of Disclosure

Though closely related to some of the foregoing, we recommend that courts should also evaluate the form and tone of the disclosure. As described in Part I.B, courts have previously considered this. 310 When a disclosure goes to the entire organization, from a highly powerful official, describing and objecting to the charge and identifying the charging parties specifically by name, as happened at Belmont Abbey, the thumb should be on the scale of finding the disclosure materially adverse. Contrast that with situations of disclosure of the details of the charge without specifically identifying the charging party 311 or inadvertent (or at least noncalculated) oral disclosures of the charging party's identity. As the retaliatory motive of the employer becomes clearer based on the form and tone of the disclosure, the burden on the employee to prove the likelihood that a reasonable employee would be dissuaded by the disclosure should lighten.

5. Totality of the Circumstances

No single factor that we have described should be dispositive. Rather, we provide these considerations to delineate a consistent and principled approach to determining when a form of confidentiality

310. See, e.g., Franklin v. Local 2 of the Sheet Metal Workers Int'l Ass'n, 565 F.3d 508, 521 (8th Cir. 2009) (finding that union's actions of posting plaintiffs' names on documents that were seen by other employees and reading aloud plaintiffs' names at union meetings created a question of material fact regarding retaliation for plaintiffs' discrimination claim with the EEOC).

311. See, e.g., Allen v. McPhee, 240 S.W.3d 803, 824 (Tenn. 2007) (finding that press releases which did not state plaintiff's "identity or any information from which others could easily identify her" and which did not "make[] any affirmative allegations against" her were not "materially adverse"), abrogated by Gossett v. Tractor Supply Co., 320 S.W.3d 777 (Tenn. 2010).
should be foisted on an employer in the charge process. Ultimately, *White*’s reasonable employee standard is incapable of accommodating a bright-line test for retaliatory disclosure or any other type of alleged retaliatory action.

Moreover, we recognize that the claim of retaliatory disclosure is somewhat at odds with incentives that are otherwise embedded in employment discrimination law; namely, to proactively engage in investigation and to take immediate corrective actions when potential violations of the law are discovered. Those may encourage or require the disclosure of the charging party’s identity. The next Part addresses how courts should incorporate these considerations.

V. DISCLOSURE AS ADVERSE ACTION UNLESS A DEFENSE EXISTS FOR “NEED TO KNOW”

The Supreme Court’s decision in *White* stated clearly that, when it comes to judging whether acts undertaken by an employer amount to actionable retaliation, “[c]ontext matters.” This is nowhere more true than in considering whether disclosure of a complainant’s identity amounts to a materially adverse action. The employer has an obligation to participate in EEOC investigations of charges. As one court noted, disclosure of an EEOC charge of discrimination to the accused’s supervisor is necessary for the discipline process.

While it is certainly true that investigations and appropriate discipline are reasonable practices for an employer confronted with an EEOC charge, disclosure outside the normal expectations presents an altogether different context. In the Belmont Abbey case, the President of the College disclosed the names of individual faculty members responsible for filing the EEOC charge against the College in an e-mail received not only by all other faculty members, but also by all staff and students at Belmont Abbey. This broad publication, without another purpose, suggests an attempt to shame or ostracize the complainants to produce a “chilling effect.” Similarly, the Eighth Circuit found in *Franklin* that some of the union’s actions to keep members informed of legal fees—such as announcing the plaintiffs’ names aloud at the meetings—might have published the
plaintiffs' identities more widely than necessary.\textsuperscript{317}

There is a clear need to balance the necessary actions an employer must take when confronted with a discrimination claim and the right for an employee to pursue such claims without fear of reprisal. If that standard were to go too far in the employer's favor, employers could undermine the effectiveness of the antidiscrimination statutes with campaigns to terrorize complaining employees into silence. If, in contrast, the standard protected employee privacy at all cost, employers would be hamstrung to investigate, address, and correct potentially unlawful actions, and would be powerless to defend against employees' claims. Thus, the balance must formalize the twin notions of considering the context of disclosure and the breadth of publication to determine whether actionable retaliation occurred.

The courts have utilized a similar balance when addressing tort doctrine in defamation and invasion of privacy claims. Often in such common law cases the issue concerns who "needs to know" the information, or the "publication" requirement, as it is known in defamation law.\textsuperscript{318} Courts in many jurisdictions do not consider intracorporate communications to meet the publication requirement on the theory of agency within a company.\textsuperscript{319} The four rights contained with the privacy tort contain stronger parallels to the "need to know" defense in Title VII retaliatory disclosure in that they do not rely on a false publication damaging to an individual but rest on an individual's right "to be let alone."\textsuperscript{320} It is the publication of a claim itself, not the truth or falsity of the claim, which makes it actionable. However, as with defamation, publication to those who have an appropriate interest in the information is protected as privileged.

We have identified two ways courts could utilize this "need to

\textsuperscript{317} See supra text accompanying notes 157–71.

\textsuperscript{318} See Frank J. Cavico, \textit{Defamation in the Private Sector: The Libelous and Slanderous Employer}, 24 U. DAYTON L. REV. 405, 412 (1999) (noting that the essential elements of defamation include "a false statement of fact, harmful to the reputation, of and concerning the plaintiff, an unprivileged publication to a third party, causation, and damages").

\textsuperscript{319} See Luckey v. Goia, 496 S.E.2d 539, 541 (Ga. Ct. App. 1998) ("To hold otherwise could impede legitimate inquiries by employers into employee conduct."); \textit{RESTATEMENT (SECOND) OF TORTS} § 577 cmts. e, i (1977).

\textsuperscript{320} William L. Prosser, \textit{Privacy}, 48 CALIF. L. REV. 383, 389 (1960). The four acts contained within the invasion of privacy tort are: intrusion into private life, public disclosure of embarrassing facts, publicity that places an individual in a false light, and the appropriation of another's name or likeness. See \textit{RESTATEMENT (SECOND) OF TORTS} § 652A (1977).
know” balancing of employer interests as part of the retaliatory disclosure claim. Courts may consider unprivileged communication as an element of causation similar to the defamation claim. In this way, claiming retaliatory motive would include showing the disclosure was made outside of those who need to know the information for legitimate employer interests. Alternatively, the “need to know” may be considered a defense available to an employer to show that the disclosure was necessary in the context of the situation and the breadth of publication. In other words, the employer could defend on the grounds that, despite the potential chilling effect of the disclosure, it had a legitimate nonretaliatory motive for doing so.

In the Belmont Abbey case, the identities of the faculty members filing a complaint of discrimination based on a change in the College’s health insurance plan were made public to all faculty, staff, and students in an e-mail notifying the College community about the complaint. In this circumstance, Belmont Abbey would have difficulty establishing the “need to know” balancing using either theory. As an element of causation, the faculty members would use the broadly distributed e-mail publication that provided unnecessary details of an EEOC filing concerning the change in health insurance. Naming the faculty members involved seemingly added nothing to the information other than to put them in an uncomfortable position of being ostracized by their president and the College community. Alternatively, as a defense to a claim of retaliation, it seems unlikely that the breadth of publication and the specificity of the publication were necessary for a full investigation of the complaint.

An e-mail or other type of broad publication that did not involve naming the faculty members involved in the complaint may meet the “need to know” standard under each of the theories proffered. If the publication was meant to address a controversial change in policy and offer transparency as well as a reinforcement of the decision as a

322. Stripling, supra note 5.
323. Compare Lafate v. Chase Manhattan Bank, 123 F. Supp. 2d. 773, 779 (D. Del. 2000) (declining to set aside a verdict of Title VII retaliation because, among other things, the plaintiff's employer unnecessarily disclosed the details of the EEOC charge internally), with Allen v. McPhee, 240 S.W.3d 803, 824 (Tenn. 2007) (declining to find retaliation based on the employer’s public denial of a sexual harassment allegation because none of the statements named the plaintiff or otherwise provided information that would lead to the discovery of her identity), abrogated by Gossett v. Tractor Supply Co., 320 S.W.3d 777 (Tenn. 2010).
public relations measure, it is possible that a court would view this as
necessary for the employer's interests rather than retaliatory. Admittedly, however, it will remain more difficult to satisfy the "need
to know" balancing of employer's interests in this framework when
the publication goes beyond those participating in an investigation of
the complaint.

CONCLUSION

Belmont Abbey did not discriminate against its employees based
on religion, as the EEOC determined, despite outrage among many
that might suggest otherwise. However, in publicly disclosing the
names of the eight faculty members who sought to utilize the process
established for asserting employee rights against discrimination, the
College may have sought to discourage other employees from taking
similar actions. The facts of the Belmont Abbey incident demonstrate
a doctrinal gap in the competing interests of employers and
employees.

In the absence of clear guidance from Title VII, the EEOC
regulatory documents, and the existing case law, this Article turned to
analogous authority dealing with anonymity in federal court
litigation, as well as the social science literature addressing the
motivations of whistleblowers and the antecedents of retribution
against whistleblowers to develop a framework for retaliatory
disclosure. As the framework establishes, employer disclosures may
both directly dissuade complainants and create secondary chilling
effects. Disclosures, then, serve a significant role in discouraging
employees from exercising rights established under Title VII. This
Article recognizes, however, there remains a need to balance the
interests of employers in appropriate disclosures. It recommends a
standard for retaliatory disclosure that considers disclosure an
adverse action unless a "need to know" defense exists.
